Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

-----Input Data-----

Highway class	Class 3		Peak hour factor, PHF	0.92	
Shoulder width	6.0	ft	% Trucks and buses	3	%
Lane width	12.0	ft	% Trucks crawling	0.0	%
Segment length	0.2	mi	Truck crawl speed	0.0	mi/hr
Terrain type	Level		% Recreational vehicles	4	%
Grade: Length	-	mi	% No-passing zones	100	%
Up/down	-	%	Access point density	20	/mi

Analysis direction volume, Vd 674 veh/h
 Opposing direction volume, Vo 404 veh/h

-----Average Travel Speed-----

Direction	Analysis(d)	Opposing (o)
PCE for trucks, ET	1.1	1.3
PCE for RVs, ER	1.0	1.0
Heavy-vehicle adj. factor,(note-5) fHV	0.997	0.991
Grade adj. factor,(note-1) fg	1.00	1.00
Directional flow rate,(note-2) vi	735 pc/h	443 pc/h

Free-Flow Speed from Field Measurement:

Field measured speed,(note-3) S FM	-	mi/h
Observed total demand,(note-3) V	-	veh/h
Estimated Free-Flow Speed:		
Base free-flow speed,(note-3) BFFS	60.0	mi/h
Adj. for lane and shoulder width,(note-3) fLS	0.0	mi/h
Adj. for access point density,(note-3) fA	5.0	mi/h
Free-flow speed, FFSd	55.0	mi/h
Adjustment for no-passing zones, fnp	2.6	mi/h
Average travel speed, ATSD	43.3	mi/h
Percent Free Flow Speed, PFFS	78.6	%

-----Percent Time-Spent-Following-----

Direction	Analysis(d)	Opposing (o)	
PCE for trucks, ET	1.0	1.0	
PCE for RVs, ER	1.0	1.0	
Heavy-vehicle adjustment factor, fHV	1.000	1.000	
Grade adjustment factor,(note-1) fg	1.00	1.00	
Directional flow rate,(note-2) vi	733	439	pc/h
Base percent time-spent-following,(note-4) BPTSFD	62.9	%	
Adjustment for no-passing zones, fnp	31.3		
Percent time-spent-following, PTSFD	82.5	%	

-----Level of Service and Other Performance Measures-----

Level of service, LOS	C	
Volume to capacity ratio, v/c	0.43	
Peak 15-min vehicle-miles of travel, VMT15	37	veh-mi
Peak-hour vehicle-miles of travel, VMT60	135	veh-mi
Peak 15-min total travel time, TT15	0.9	veh-h
Capacity from ATS, CdATS	1685	veh/h
Capacity from PTSF, CdPTSF	1700	veh/h
Directional Capacity	1685	veh/h

-----Passing Lane Analysis-----

Total length of analysis segment, Lt	0.2	mi
Length of two-lane highway upstream of the passing lane, Lu	-	mi
Length of passing lane including tapers, Lpl	-	mi
Average travel speed, ATSD (from above)	43.3	mi/h
Percent time-spent-following, PTSFD (from above)	82.5	
Level of service, LOSd (from above)	C	

-----Average Travel Speed with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	732.6
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	2.95
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	80.4
Effective width of outside lane, We	35.34
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	-1.53
Bicycle LOS	A

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	2.96
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	42.4
Effective width of outside lane, We	38.49
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	-3.02
Bicycle LOS	A

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

MULTI LANE HIGHWAY SEGMENT ANALYSIS

File Name: OY_FRI_Bonnyvi ew. xuf
 Analyst: Kimley-Horn
 Agency:
 Jurisdiction:
 Date: 5/23/18
 Analysis Year: Opening Year (2025) plus Project (3A)
 Time Period Analyzed: Friday PM Peak-Hour
 Project Description: Bonnyvi ew Road, w/o Bechelli Lane
 Units: U.S. Customary

Direction 1: EB

LOS and Performance Measures

Flow rate, v_p	1572	pc/h/ln
Capacity, C	3800	pc/h/ln
Speed, S	44.1	mi/h
Density, D	17.8	pc/mi/ln
Level of Service, LOS	B	

Step 1: Input Data

Number of Lanes, N	2	ln
Lane Width	12	ft
Segment Length	-	ft
Terrain Type	Level	
Percent Grade	-	%
Grade Length	-	mi
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Median Type	Divided	
Access Point Density	0.0	access points/mi
Demand Volume, V	1404	veh/h
Peak Hour Factor, PHF	0.92	
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Estimate and Adjust FFS

Estimating FFS		
Measured or Base FFS	Base	
Base Free-Flow Speed, BFFS	45.0	mi/h
Lane width	12	ft
Lane Width Adjustment, fLW	0.0	mi/h
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Total Lateral Clearance, TLC	9.00	ft
Total Lateral Clearance Adjustment, fTLC	0.9	mi/h
Median Type	Divided	
Median Type Adjustment, fM	0.0	mi/h
Access Point Density	0.0	access points/mi
Access Point Density Adjustment, fA	0.0	mi/h
Free-Flow Speed, FFS	44.1	mi/h
Speed Adjustments		
Driver Population	All Familiar	
Speed Adjustment Factor, SAF	1.000	
Adjusted Free-Flow Speed, FFSadj	44.1	mi/h

Step 3: Estimate and Adjust Capacity

Adjusted Free-flow Speed, FFSadj	44.1	mi/h
Capacity, c	1900	pc/h/ln
Capacity Adjustments		
Driver Population	All Familiar	
Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity, cadj	1900	pc/h/ln

Step 4: Adjust Demand Volume

Demand Volume, V	1404	veh/h
Peak Hour Factor, PHF	0.92	
Number of Lanes, N	2	ln
Terrain type	Level	
Percent Grade	-	%
Grade Length	-	mi
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%
Proportion of Total Trucks, PT	0.03	
Heavy Vehicle PCE, ET	2.000	
Heavy vehicle adjustment, f_{hv} :	0.971	
Demand Adjustment Factor, DAF	1.000	
Demand Flow Rate, v_p	786	pc/h/ln

Steps 5 and 6: Estimate Speed and Density and Determine LOS

Demand Flow Rate, v_p	786	pc/h/ln
Free-Flow Speed, FFS	45.0	mi/h
Capacity, c	1900	pc/h/ln
Breakpoint, BP	1400	pc/h/ln
Density at Capacity, D_c	45	pc/mi/ln
Mean Speed under Base Conditions, S	44.1	mi/h
Density, D	17.8	pc/mi/ln
Level of service, LOS	B	

This Multilane Highway Segment text report was created on 5/23/2018 16:54:04

Level of Service, LOS	C	

Step 1: Input Data

Number of Lanes, N	2	ln
Lane Width	12	ft
Segment Length	-	ft
Terrain Type	Level	
Percent Grade	-	%
Grade Length	-	mi
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Median Type	Divided	
Access Point Density	0.0	access points/mi
Demand Volume, V	1467	veh/h
Peak Hour Factor, PHF	0.92	
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Estimate and Adjust FFS

Estimating FFS		
Measured or Base FFS	Base	
Base Free-Flow Speed, BFFS	45.0	mi/h
Lane width	12	ft
Lane Width Adjustment, fLW	0.0	mi/h
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Total Lateral Clearance, TLC	9.00	ft
Total Lateral Clearance Adjustment, fTLC	0.9	mi/h
Median Type	Divided	
Median Type Adjustment, fM	0.0	mi/h
Access Point Density	0.0	access points/mi
Access Point Density Adjustment, fA	0.0	mi/h
Free-Flow Speed, FFS	44.1	mi/h
Speed Adjustments		
Driver Population	All Familiar	
Speed Adjustment Factor, SAF	1.000	
Adjusted Free-Flow Speed, FFSadj	44.1	mi/h

Step 3: Estimate and Adjust Capacity

Adjusted Free-flow Speed, FFSadj	44.1	mi/h
Capacity, c	1900	pc/h/ln
Capacity Adjustments		
Driver Population	All Familiar	
Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity, cadj	1900	pc/h/ln

Step 4: Adjust Demand Volume

Demand Volume, V	1467	veh/h
Peak Hour Factor, PHF	0.92	
Number of lanes, N	2	ln
Terrain type	Level	
Percent Grade	-	%
Grade Length	-	mi
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%
Proportion of Total Trucks, PT	0.03	
Heavy Vehicle PCE, ET	2.000	
Heavy vehicle adjustment, f_{hv} :	0.971	
Demand Adjustment Factor, DAF	1.000	
Demand Flow Rate, v_p	821	pc/h/ln

Steps 5 and 6: Estimate Speed and Density and Determine LOS

Demand Flow Rate, v_p	821	pc/h/ln
Free-Flow Speed, FFS	45.0	mi/h
Capacity, c	1900	pc/h/ln
Breakpoint, BP	1400	pc/h/ln
Density at Capacity, D_c	45	pc/mi/ln
Mean Speed under Base Conditions, S	44.1	mi/h
Density, D	18.6	pc/mi/ln
Level of service, LOS	C

Date Performed 6/8/2017
Analysis Time Period Friday PM Peak-Hour
Highway North Road, e/o Oak St (EB)
From/To
Jurisdiction
Analysis Year Opening Year (2025) plus Proje
Description Redding Rancheria (E)

-----Input Data-----

Highway class	Class 3		Peak hour factor, PHF	0.92	
Shoulder width	6.0	ft	% Trucks and buses	3	%
Lane width	12.0	ft	% Trucks crawling	0.0	%
Segment length	0.2	mi	Truck crawl speed	0.0	mi/hr
Terrain type	Level		% Recreational vehicles	4	%
Grade: Length	-	mi	% No-passing zones	0	%
Up/down	-	%	Access point density	40	/mi

Analysis direction volume, Vd 820 veh/h
Opposing direction volume, Vo 669 veh/h

-----Average Travel Speed-----

Direction	Analysis(d)	Opposing (o)
PCE for trucks, ET	1.0	1.1
PCE for RVs, ER	1.0	1.0
Heavy-vehicle adj. factor,(note-5) fHV	1.000	0.997
Grade adj. factor,(note-1) fg	1.00	1.00
Directional flow rate,(note-2) vi	891 pc/h	729 pc/h

Free-Flow Speed from Field Measurement:

Field measured speed,(note-3) S FM	-	mi/h
Observed total demand,(note-3) V	-	veh/h
Estimated Free-Flow Speed:		
Base free-flow speed,(note-3) BFFS	60.0	mi/h
Adj. for lane and shoulder width,(note-3) fLS	0.0	mi/h
Adj. for access point density,(note-3) fA	10.0	mi/h
Free-flow speed, FFSd	50.0	mi/h
Adjustment for no-passing zones, fnp	0.5	mi/h
Average travel speed, ATSD	37.0	mi/h
Percent Free Flow Speed, PFFS	73.9	%

-----Percent Time-Spent-Following-----

Direction	Analysis(d)	Opposing (o)	
PCE for trucks, ET	1.0	1.0	
PCE for RVs, ER	1.0	1.0	
Heavy-vehicle adjustment factor, fHV	1.000	1.000	
Grade adjustment factor,(note-1) fg	1.00	1.00	
Directional flow rate,(note-2) vi	891	727	pc/h
Base percent time-spent-following,(note-4) BPTSFD	72.5	%	
Adjustment for no-passing zones, fnp	11.3		
Percent time-spent-following, PTSFD	78.7	%	

-----Level of Service and Other Performance Measures-----

Level of service, LOS	D	
Volume to capacity ratio, v/c	0.52	
Peak 15-min vehicle-miles of travel, VMT15	45	veh-mi
Peak-hour vehicle-miles of travel, VMT60	164	veh-mi
Peak 15-min total travel time, TT15	1.2	veh-h
Capacity from ATS, CdATS	1695	veh/h
Capacity from PTSF, CdPTSF	1700	veh/h
Directional Capacity	1695	veh/h

-----Passing Lane Analysis-----

Total length of analysis segment, Lt	0.2	mi
Length of two-lane highway upstream of the passing lane, Lu	-	mi
Length of passing lane including tapers, Lpl	-	mi
Average travel speed, ATSD (from above)	37.0	mi/h
Percent time-spent-following, PTSFD (from above)	78.7	
Level of service, LOSd (from above)	D	

-----Average Travel Speed with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	891.3
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	3.05
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Peak 15-min total travel time, TT15	0.2	veh-h
Capacity from ATS, CdATS	1651	veh/h
Capacity from PTSF, CdPTSF	1690	veh/h
Directional Capacity	1651	veh/h

-----Passing Lane Analysis-----

Total length of analysis segment, Lt	0.2	mi
Length of two-lane highway upstream of the passing lane, Lu	-	mi
Length of passing lane including tapers, Lpl	-	mi
Average travel speed, ATSD (from above)	52.1	mi/h
Percent time-spent-following, PTSFd (from above)	58.4	
Level of service, LOSd (from above)	B	

-----Average Travel Speed with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	244.6
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	3.27
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	613.0
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	2.86
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	1001.1
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	3.11
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	34.8
Effective width of outside lane, We	39.12
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	-3.36
Bicycle LOS	A

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

 Analysis Year: Cumulative (2040) plus Project (2A)
 Time Period Analyzed: Saturday PM Peak-Hour
 Project Description: Bonnyvi ew Road, w/o Bechelli Lane
 Units: U.S. Customary

Direction 1: EB

LOS and Performance Measures

Flow rate, v_p	1106	pc/h/ln
Capacity, C	3800	pc/h/ln
Speed, S	44.1	mi/h
Density, D	12.5	pc/mi/ln
Level of Service, LOS	B	

Step 1: Input Data

Number of Lanes, N	2	ln
Lane Width	12	ft
Segment Length	-	ft
Terrain Type	Level	
Percent Grade	-	%
Grade Length	-	mi
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Median Type	Divided	
Access Point Density	0.0	access points/mi
Demand Volume, V	988	veh/h
Peak Hour Factor, PHF	0.92	
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Estimate and Adjust FFS

Estimating FFS		
Measured or Base FFS	Base	
Base Free-Flow Speed, BFFS	45.0	mi/h
Lane width	12	ft
Lane Width Adjustment, fLW	0.0	mi/h
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Total Lateral Clearance, TLC	9.00	ft
Total Lateral Clearance Adjustment, fTLC	0.9	mi/h
Median Type	Divided	
Median Type Adjustment, fM	0.0	mi/h
Access Point Density	0.0	access points/mi
Access Point Density Adjustment, fA	0.0	mi/h
Free-Flow Speed, FFS	44.1	mi/h
Speed Adjustments		
Driver Population	All Familiar	
Speed Adjustment Factor, SAF	1.000	
Adjusted Free-Flow Speed, FFSadj	44.1	mi/h

Step 3: Estimate and Adjust Capacity

Adjusted Free-flow Speed, FFSadj	44.1	mi/h
Capacity, c	1900	pc/h/l n
Capacity Adjustments		
Driver Population	All Familiar	
Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity, cadj	1900	pc/h/l n

Step 4: Adjust Demand Volume

Demand Volume, V	988	veh/h
Peak Hour Factor, PHF	0.92	
Number of Lanes, N	2	l n
Terrain type	Level	
Percent Grade	-	%
Grade Length	-	mi
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%
Proportion of Total Trucks, PT	0.03	
Heavy Vehicle PCE, ET	2.000	
Heavy vehicle adjustment, f_{hv} :	0.971	
Demand Adjustment Factor, DAF	1.000	
Demand Flow Rate, v_p	553	pc/h/l n

Steps 5 and 6: Estimate Speed and Density and Determine LOS

Demand Flow Rate, v_p	553	pc/h/l n
Free-Flow Speed, FFS	45.0	mi/h
Capacity, c	1900	pc/h/l n
Breakpoint, BP	1400	pc/h/l n
Density at Capacity, D_c	45	pc/mi /l n
Mean Speed under Base Conditions, S	44.1	mi/h
Density, D	12.5	pc/mi /l n
Level of service, LOS	B

Direction 2: WB

LOS and Performance Measures

Flow rate, v_p	1625	pc/h/ln
Capacity, C	3800	pc/h/ln
Speed, S	44.1	mi/h
Density, D	18.4	pc/mi/ln
Level of Service, LOS	C	

Step 1: Input Data

Number of Lanes, N	2	ln
Lane Width	12	ft
Segment Length	-	ft
Terrain Type	Level	
Percent Grade	-	%
Grade Length	-	mi
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Median Type	Divided	
Access Point Density	0.0	access points/mi
Demand Volume, V	1452	veh/h
Peak Hour Factor, PHF	0.92	
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Estimate and Adjust FFS

Estimating FFS		
Measured or Base FFS	Base	
Base Free-Flow Speed, BFFS	45.0	mi/h
Lane width	12	ft
Lane Width Adjustment, fLW	0.0	mi/h
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Total Lateral Clearance, TLC	9.00	ft
Total Lateral Clearance Adjustment, fTLC	0.9	mi/h
Median Type	Divided	
Median Type Adjustment, fM	0.0	mi/h
Access Point Density	0.0	access points/mi
Access Point Density Adjustment, fA	0.0	mi/h
Free-Flow Speed, FFS	44.1	mi/h
Speed Adjustments		
Driver Population	All Familiar	
Speed Adjustment Factor, SAF	1.000	
Adjusted Free-Flow Speed, FFSadj	44.1	mi/h

Step 3: Estimate and Adjust Capacity

Adjusted Free-flow Speed, FFSadj	44.1	mi/h
Capacity, c	1900	pc/h/ln
Capacity Adjustments		
Driver Population	All Familiar	
Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity, cadj	1900	pc/h/ln

Step 4: Adjust Demand Volume

Demand Volume, V	1452	veh/h
Peak Hour Factor, PHF	0.92	
Number of Lanes, N	2	ln
Terrain type	Level	
Percent Grade	-	%
Grade Length	-	mi
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%
Proportion of Total Trucks, PT	0.03	
Heavy Vehicle PCE, ET	2.000	
Heavy vehicle adjustment, f_{hv} :	0.971	
Demand Adjustment Factor, DAF	1.000	
Demand Flow Rate, v_p	812	pc/h/ln

Steps 5 and 6: Estimate Speed and Density and Determine LOS

Demand Flow Rate, v_p	812	pc/h/ln
Free-Flow Speed, FFS	45.0	mi/h
Capacity, c	1900	pc/h/ln
Breakpoint, BP	1400	pc/h/ln
Density at Capacity, D_c	45	pc/mi/ln
Mean Speed under Base Conditions, S	44.1	mi/h
Density, D	18.4	pc/mi/ln
Level of service, LOS	C

Segment length	0.2	mi	Truck crawl speed	0.0	mi/hr
Terrain type	Level		% Recreational vehicles	4	%
Grade: Length	-	mi	% No-passing zones	100	%
Up/down	-	%	Access point density	5	/mi

Analysis direction volume, Vd 503 veh/h
 Opposing direction volume, Vo 572 veh/h

----- Average Travel Speed -----

Direction	Analysis(d)	Opposing (o)
PCE for trucks, ET	1.2	1.1
PCE for RVs, ER	1.0	1.0
Heavy-vehicle adj. factor, (note-5) fHV	0.994	0.997
Grade adj. factor, (note-1) fg	1.00	1.00
Directional flow rate, (note-2) vi	550 pc/h	624 pc/h

Free-Flow Speed from Field Measurement:

Field measured speed, (note-3) S FM	-	mi/h
Observed total demand, (note-3) V	-	veh/h
Estimated Free-Flow Speed:		
Base free-flow speed, (note-3) BFFS	60.0	mi/h
Adj. for lane and shoulder width, (note-3) fLS	0.0	mi/h
Adj. for access point density, (note-3) fA	1.3	mi/h
Free-flow speed, FFSd	58.8	mi/h
Adjustment for no-passing zones, fnp	1.9	mi/h
Average travel speed, ATSD	47.7	mi/h
Percent Free Flow Speed, PFFS	81.2	%

-----Percent Time-Spent-Following-----

Direction	Analysis(d)	Opposing (o)	
PCE for trucks, ET	1.0	1.0	
PCE for RVs, ER	1.0	1.0	
Heavy-vehicle adjustment factor, fHV	1.000	1.000	
Grade adjustment factor,(note-1) fg	1.00	1.00	
Directional flow rate,(note-2) vi	547	622	pc/h
Base percent time-spent-following,(note-4) BPTSFD	55.0	%	
Adjustment for no-passing zones, fnp	34.6		
Percent time-spent-following, PTSFD	71.2	%	

-----Level of Service and Other Performance Measures-----

Level of service, LOS	C	
Volume to capacity ratio, v/c	0.32	
Peak 15-min vehicle-miles of travel, VMT15	27	veh-mi
Peak-hour vehicle-miles of travel, VMT60	101	veh-mi
Peak 15-min total travel time, TT15	0.6	veh-h
Capacity from ATS, CdATS	1695	veh/h
Capacity from PTSF, CdPTSF	1700	veh/h
Directional Capacity	1695	veh/h

-----Passing Lane Analysis-----

Total length of analysis segment, Lt	0.2	mi
Length of two-lane highway upstream of the passing lane, Lu	-	mi
Length of passing lane including tapers, Lpl	-	mi
Average travel speed, ATSD (from above)	47.7	mi/h
Percent time-spent-following, PTSFD (from above)	71.2	
Level of service, LOSd (from above)	C	

-----Average Travel Speed with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	546.7
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	2.81
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	295.7
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	2.49
Bicycle LOS	B

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Peak 15-min vehicle-miles of travel, VMT15	39	veh-mi
Peak-hour vehicle-miles of travel, VMT60	144	veh-mi
Peak 15-min total travel time, TT15	0.9	veh-h
Capacity from ATS, CdATS	1700	veh/h
Capacity from PTSF, CdPTSF	1700	veh/h
Directional Capacity	1700	veh/h

-----Passing Lane Analysis-----

Total length of analysis segment, Lt	0.2	mi
Length of two-lane highway upstream of the passing lane, Lu	-	mi
Length of passing lane including tapers, Lpl	-	mi
Average travel speed, ATSD (from above)	44.4	mi/h
Percent time-spent-following, PTSFD (from above)	80.5	
Level of service, LOSd (from above)	C	

-----Average Travel Speed with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	780.4
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	2.99
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

MULTI LANE HIGHWAY SEGMENT ANALYSIS

File Name:	2040_SAT_Bonnyvi ew. xuf
Analyst:	Kimley-Horn
Agency:	
Jurisdiction:	
Date:	5/30/18
Analysis Year:	Cumulative (2040) plus Project (3A)
Time Period Analyzed:	Saturday PM Peak-Hour
Project Description:	Bonnyvi ew Road, w/o Bechelli Lane
Units:	U.S. Customary

Direction 1: EB

LOS and Performance Measures

Flow rate, v_p	1190	pc/h/ln
Capacity, C	3800	pc/h/ln
Speed, S	44.1	mi/h
Density, D	13.5	pc/mi/ln
Level of Service, LOS	B	

Step 1: Input Data

Number of Lanes, N	2	ln
Lane Width	12	ft
Segment Length	-	ft
Terrain Type	Level	
Percent Grade	-	%
Grade Length	-	mi
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Median Type	Divided	
Access Point Density	0.0	access points/mi
Demand Volume, V	1063	veh/h
Peak Hour Factor, PHF	0.92	
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Estimate and Adjust FFS

Estimating FFS		
Measured or Base FFS	Base	
Base Free-Flow Speed, BFFS	45.0	mi/h
Lane width	12	ft
Lane Width Adjustment, fLW	0.0	mi/h
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Total Lateral Clearance, TLC	9.00	ft
Total Lateral Clearance Adjustment, fTLC	0.9	mi/h
Median Type	Divided	
Median Type Adjustment, fM	0.0	mi/h
Access Point Density	0.0	access points/mi
Access Point Density Adjustment, fA	0.0	mi/h
Free-Flow Speed, FFS	44.1	mi/h
Speed Adjustments		
Driver Population	All Familiar	
Speed Adjustment Factor, SAF	1.000	
Adjusted Free-Flow Speed, FFSadj	44.1	mi/h

Step 3: Estimate and Adjust Capacity

Adjusted Free-flow Speed, FFSadj	44.1	mi/h
Capacity, c	1900	pc/h/l n
Capacity Adjustments		
Driver Population	All Familiar	
Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity, cadj	1900	pc/h/l n

Step 4: Adjust Demand Volume

Demand Volume, V	1063	veh/h
Peak Hour Factor, PHF	0.92	
Number of Lanes, N	2	l n
Terrain type	Level	
Percent Grade	-	%
Grade Length	-	mi
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%
Proportion of Total Trucks, PT	0.03	
Heavy Vehicle PCE, ET	2.000	
Heavy vehicle adjustment, f_{hv} :	0.971	
Demand Adjustment Factor, DAF	1.000	
Demand Flow Rate, v_p	595	pc/h/l n

Steps 5 and 6: Estimate Speed and Density and Determine LOS

Demand Flow Rate, v_p	595	pc/h/l n
Free-Flow Speed, FFS	45.0	mi/h
Capacity, c	1900	pc/h/l n
Breakpoint, BP	1400	pc/h/l n
Density at Capacity, D_c	45	pc/mi /l n
Mean Speed under Base Conditions, S	44.1	mi/h
Density, D	13.5	pc/mi /l n
Level of service, LOS	B

MULTI LANE HIGHWAY SEGMENT ANALYSIS

File Name:	2040_SAT_Bonnyvi ew. xuf
Analyst:	Kimley-Horn
Agency:	
Jurisdiction:	
Date:	5/30/18
Analysis Year:	Cumulative (2040) plus Project (3A)
Time Period Analyzed:	Saturday PM Peak-Hour
Project Description:	Bonnyvi ew Road, w/o Bechelli Lane
Units:	U.S. Customary

Direction 2: WB

LOS and Performance Measures

Flow rate, v_p	1333	pc/h/ln
Capacity, C	3800	pc/h/ln
Speed, S	44.1	mi/h
Density, D	15.1	pc/mi/ln
Level of Service, LOS	B	

Step 1: Input Data

Number of Lanes, N	2	ln
Lane Width	12	ft
Segment Length	-	ft
Terrain Type	Level	
Percent Grade	-	%
Grade Length	-	mi
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Median Type	Divided	
Access Point Density	0.0	access points/mi
Demand Volume, V	1191	veh/h
Peak Hour Factor, PHF	0.92	
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Estimate and Adjust FFS

Estimating FFS		
Measured or Base FFS	Base	
Base Free-Flow Speed, BFFS	45.0	mi/h
Lane width	12	ft
Lane Width Adjustment, fLW	0.0	mi/h
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	3	ft
Total Lateral Clearance, TLC	9.00	ft
Total Lateral Clearance Adjustment, fTLC	0.9	mi/h
Median Type	Divided	
Median Type Adjustment, fM	0.0	mi/h
Access Point Density	0.0	access points/mi
Access Point Density Adjustment, fA	0.0	mi/h
Free-Flow Speed, FFS	44.1	mi/h
Speed Adjustments		
Driver Population	All Familiar	
Speed Adjustment Factor, SAF	1.000	
Adjusted Free-Flow Speed, FFSadj	44.1	mi/h

Step 3: Estimate and Adjust Capacity

Adjusted Free-flow Speed, FFSadj	44.1	mi/h
Capacity, c	1900	pc/h/l n
Capacity Adjustments		
Driver Population	All Familiar	
Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity, cadj	1900	pc/h/l n

Step 4: Adjust Demand Volume

Demand Volume, V	1191	veh/h
Peak Hour Factor, PHF	0.92	
Number of Lanes, N	2	l n
Terrain type	Level	
Percent Grade	-	%
Grade Length	-	mi
Percent Total Trucks	3.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%
Proportion of Total Trucks, PT	0.03	
Heavy Vehicle PCE, ET	2.000	
Heavy vehicle adjustment, f_{hv} :	0.971	
Demand Adjustment Factor, DAF	1.000	
Demand Flow Rate, v_p	666	pc/h/l n

Steps 5 and 6: Estimate Speed and Density and Determine LOS

Demand Flow Rate, v_p	666	pc/h/l n
Free-Flow Speed, FFS	45.0	mi/h
Capacity, c	1900	pc/h/l n
Breakpoint, BP	1400	pc/h/l n
Density at Capacity, D_c	45	pc/mi /l n
Mean Speed under Base Conditions, S	44.1	mi/h
Density, D	15.1	pc/mi /l n
Level of service, LOS	B

-----Directional Two-Lane Highway Segment Analysis-----

Analyst
Agency/Co.
Date Performed 5/.28/18
Analysis Time Period Saturday PM Peak-Hour
Highway Church Creek Road (EB)
From/To e/o Alrose Ln
Jurisdiction
Analysis Year Cumulative (2040) plus Project
Description Redding Rancheria (3A)

-----Input Data-----

Highway class	Class 3		Peak hour factor, PHF	0.92	
Shoulder width	6.0	ft	% Trucks and buses	3	%
Lane width	12.0	ft	% Trucks crawling	0.0	%
Segment length	0.2	mi	Truck crawl speed	0.0	mi/hr
Terrain type	Level		% Recreational vehicles	4	%
Grade: Length	-	mi	% No-passing zones	100	%
Up/down	-	%	Access point density	5	/mi

Analysis direction volume, Vd 461 veh/h
Opposing direction volume, Vo 498 veh/h

-----Average Travel Speed-----

Direction	Analysis(d)	Opposing (o)
PCE for trucks, ET	1.2	1.2
PCE for RVs, ER	1.0	1.0
Heavy-vehicle adj. factor,(note-5) fHV	0.994	0.994
Grade adj. factor,(note-1) fg	1.00	1.00
Directional flow rate,(note-2) vi	504 pc/h	545 pc/h

Free-Flow Speed from Field Measurement:

Field measured speed,(note-3) S FM	-	mi/h
Observed total demand,(note-3) V	-	veh/h
Estimated Free-Flow Speed:		
Base free-flow speed,(note-3) BFFS	60.0	mi/h
Adj. for lane and shoulder width,(note-3) fLS	0.0	mi/h
Adj. for access point density,(note-3) fA	1.3	mi/h
Free-flow speed, FFSd	58.8	mi/h
Adjustment for no-passing zones, fnp	2.4	mi/h
Average travel speed, ATSD	48.2	mi/h
Percent Free Flow Speed, PFFS	82.0	%

-----Percent Time-Spent-Following-----

Direction	Analysis(d)	Opposing (o)
PCE for trucks, ET	1.0	1.0
PCE for RVs, ER	1.0	1.0
Heavy-vehicle adjustment factor, fHV	1.000	1.000
Grade adjustment factor, (note-1) fg	1.00	1.00
Directional flow rate, (note-2) vi	501 pc/h	541 pc/h
Base percent time-spent-following, (note-4) BPTSFD	52.3 %	
Adjustment for no-passing zones, fnp	38.6	
Percent time-spent-following, PTSFD	70.9 %	

-----Level of Service and Other Performance Measures-----

Level of service, LOS	C	
Volume to capacity ratio, v/c	0.30	
Peak 15-min vehicle-miles of travel, VMT15	25	veh-mi
Peak-hour vehicle-miles of travel, VMT60	92	veh-mi
Peak 15-min total travel time, TT15	0.5	veh-h
Capacity from ATS, CdATS	1690	veh/h
Capacity from PTSF, CdPTSF	1700	veh/h
Directional Capacity	1690	veh/h

-----Passing Lane Analysis-----

Total length of analysis segment, Lt	0.2	mi
Length of two-lane highway upstream of the passing lane, Lu	-	mi
Length of passing lane including tapers, Lpl	-	mi
Average travel speed, ATSD (from above)	48.2	mi/h
Percent time-spent-following, PTSFD (from above)	70.9	
Level of service, LOSd (from above)	C	

-----Average Travel Speed with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	501.1
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	2.76
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	3.09
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	148.9
Effective width of outside lane, We	29.67
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	0.62
Bicycle LOS	A

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Speed, S	60.0	mi/h
Density, D	3.8	pc/mi/ln
Level of Service, LOS	A	

Step 1: Input Data

Number of Lanes, N	2	ln
Lane Width	12	ft
Segment Length	-	ft
Terrain Type	Level	
Percent Grade	-	%
Grade Length	-	mi
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	6	ft
Median Type	Divided	
Access Point Density	0.0	access points/mi
Demand Volume, V	427	veh/h
Peak Hour Factor, PHF	0.94	
Percent Total Trucks	0.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%

Step 2: Estimate and Adjust FFS

Estimating FFS		
Measured or Base FFS	Base	
Base Free-Flow Speed, BFFS	60.0	mi/h
Lane width	12	ft
Lane Width Adjustment, fLW	0.0	mi/h
Right-Side Lateral Clearance, LCR	6	ft
Left-Side Lateral Clearance, LCL	6	ft
Total Lateral Clearance, TLC	12.00	ft
Total Lateral Clearance Adjustment, fTLC	0.0	mi/h
Median Type	Divided	
Median Type Adjustment, fM	0.0	mi/h
Access Point Density	0.0	access points/mi
Access Point Density Adjustment, fA	0.0	mi/h
Free-Flow Speed, FFS	60.0	mi/h
Speed Adjustments		
Driver Population	All Familiar	
Speed Adjustment Factor, SAF	1.000	
Adjusted Free-Flow Speed, FFSadj	60.0	mi/h

Step 3: Estimate and Adjust Capacity

Adjusted Free-flow Speed, FFSadj	60.0	mi/h
Capacity, c	2200	pc/h/ln
Capacity Adjustments		
Driver Population	All Familiar	
Capacity Adjustment Factor, CAF	1.000	
Adjusted Capacity, cadj	2200	pc/h/ln

Step 4: Adjust Demand Volume

Demand Volume, V	427	veh/h
Peak Hour Factor, PHF	0.94	
Number of Lanes, N	2	ln
Terrain type	Level	
Percent Grade	-	%
Grade Length	-	mi
Percent Total Trucks	0.00	%
Percent Single-Unit Trucks, SUT	-	%
Percent Tractor-Trailers, TT	-	%
Proportion of Total Trucks, PT	0.00	
Heavy Vehicle PCE, ET	2.000	
Heavy vehicle adjustment, f_{hv} :	1.000	
Demand Adjustment Factor, DAF	1.000	
Demand Flow Rate, v_p	227	pc/h/ln

Steps 5 and 6: Estimate Speed and Density and Determine LOS

Demand Flow Rate, v_p	227	pc/h/ln
Free-Flow Speed, FFS	60.0	mi/h
Capacity, c	2200	pc/h/ln
Breakpoint, BP	1400	pc/h/ln
Density at Capacity, D_c	45	pc/mi/ln
Mean Speed under Base Conditions, S	60.0	mi/h
Density, D	3.8	pc/mi/ln
Level of service, LOS	A

-----Directional Two-Lane Highway Segment Analysis-----

Analyst
Agency/Co.
Date Performed 5/30/18
Analysis Time Period Friday PM Peak-Hour
Highway Canyon Road (NB)
From/To
Jurisdiction
Analysis Year Cumulative (2040) plus Proje
Description Redding Rancheria (F)

-----Input Data-----

Highway class	Class 3		Peak hour factor, PHF	0.92	
Shoulder width	6.0	ft	% Trucks and buses	6	%
Lane width	12.0	ft	% Trucks crawling	0.0	%
Segment length	0.2	mi	Truck crawl speed	0.0	mi/hr
Terrain type	Level		% Recreational vehicles	4	%
Grade: Length	-	mi	% No-passing zones	100	%
Up/down	-	%	Access point density	0	/mi

Analysis direction volume, Vd 240 veh/h
Opposing direction volume, Vo 368 veh/h

-----Average Travel Speed-----

Direction	Analysis(d)	Opposing (o)
PCE for trucks, ET	1.4	1.3
PCE for RVs, ER	1.0	1.0
Heavy-vehicle adj. factor,(note-5) fHV	0.977	0.982
Grade adj. factor,(note-1) fg	1.00	1.00
Directional flow rate,(note-2) vi	267 pc/h	407 pc/h

Free-Flow Speed from Field Measurement:

Field measured speed,(note-3) S FM	-	mi/h
Observed total demand,(note-3) V	-	veh/h
Estimated Free-Flow Speed:		
Base free-flow speed,(note-3) BFFS	60.0	mi/h
Adj. for lane and shoulder width,(note-3) fLS	0.0	mi/h
Adj. for access point density,(note-3) fA	0.0	mi/h
Free-flow speed, FFSd	60.0	mi/h
Adjustment for no-passing zones, fnp	3.8	mi/h
Average travel speed, ATSD	50.9	mi/h
Percent Free Flow Speed, PFFS	84.9	%

-----Percent Time-Spent-Following-----

Direction	Analysis(d)	Opposing (o)	
PCE for trucks, ET	1.1	1.1	
PCE for RVs, ER	1.0	1.0	
Heavy-vehicle adjustment factor, fHV	0.994	0.994	
Grade adjustment factor, (note-1) fg	1.00	1.00	
Directional flow rate, (note-2) vi	262	402	pc/h
Base percent time-spent-following, (note-4) BPTSFD	31.2	%	
Adjustment for no-passing zones, fnp	50.0		
Percent time-spent-following, PTSFD	50.9	%	

-----Level of Service and Other Performance Measures-----

Level of service, LOS	B	
Volume to capacity ratio, v/c	0.16	
Peak 15-min vehicle-miles of travel, VMT15	13	veh-mi
Peak-hour vehicle-miles of travel, VMT60	48	veh-mi
Peak 15-min total travel time, TT15	0.3	veh-h
Capacity from ATS, CdATS	1669	veh/h
Capacity from PTSF, CdPTSF	1700	veh/h
Directional Capacity	1669	veh/h

-----Passing Lane Analysis-----

Total length of analysis segment, Lt	0.2	mi
Length of two-lane highway upstream of the passing lane, Lu	-	mi
Length of passing lane including tapers, Lpl	-	mi
Average travel speed, ATSD (from above)	50.9	mi/h
Percent time-spent-following, PTSFD (from above)	50.9	
Level of service, LOSd (from above)	B	

-----Average Travel Speed with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for average travel speed, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for average travel speed, Ld	-	mi
Adj. factor for the effect of passing lane on average speed, fpl	-	
Average travel speed including passing lane, ATSpl	-	
Percent free flow speed including passing lane, PFFSpl	0.0	%

-----Percent Time-Spent-Following with Passing Lane-----

Downstream length of two-lane highway within effective length of passing lane for percent time-spent-following, Lde	-	mi
Length of two-lane highway downstream of effective length of the passing lane for percent time-spent-following, Ld	-	mi
Adj. factor for the effect of passing lane on percent time-spent-following, fpl	-	
Percent time-spent-following including passing lane, PTSFpl	-	%

-----Level of Service and Other Performance Measures with Passing Lane-----

Level of service including passing lane, LOSpl	E	
Peak 15-min total travel time, TT15	-	veh-h

-----Bicycle Level of Service-----

Posted speed limit, Sp	55
Percent of segment with occupied on-highway parking	0
Pavement rating, P	3
Flow rate in outside lane, vOL	260.9
Effective width of outside lane, We	24.00
Effective speed factor, St	4.79
Bicycle LOS Score, BLOS	3.31
Bicycle LOS	C

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If v_i (v_d or v_o) $\geq 1,700$ pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for $v > 200$ veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

Subject: Traffic Noise Increases on Adra Way and Bechelli Lane south of South Bonneyview – Redding Rancheria Strawberry Fields Site

Dear Ms. Sawyer:

Saxelby Acoustics has prepared an analysis of traffic noise increases on the two above-referenced roadway segments. The intent of this analysis is to provide an assessment of the day/night (L_{dn}) noise level along these segments for comparison to the standards of the City of Redding and Shasta County.

Significance Criteria

CEQA does not define a threshold of “significant increase” regarding noise exposure; Generally, a project may have a significant effect on the environment if it will substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been developed. These standards state that a noise impact may be considered significant if it would generate noise that would conflict with local project criteria or ordinances, or substantially increase noise levels at noise sensitive land uses. The potential increase in traffic noise from the project is a factor in determining significance. Research into the human perception of changes in sound level indicates the following:

- A 3-dB change is barely perceptible,
- A 5-dB change is clearly perceptible, and
- A 10-dB change is perceived as being twice or half as loud.

A limitation of using a single noise level increase value to evaluate noise impacts is that it fails to account for pre-project-noise conditions. Table 1 is based upon recommendations made by the Federal Interagency Committee on Noise (FICON) to provide guidance in the assessment of changes in ambient noise levels resulting from aircraft operations. The recommendations are based upon studies that relate aircraft noise levels to the percentage of persons highly annoyed by the noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, it has been accepted that they are applicable to all sources of noise described in terms of cumulative noise exposure metrics such as the L_{dn} .

TABLE 1: SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE

Ambient Noise Level Without Project, L_{dn}	Increase Required for Significant Impact
<60 dB	+5.0 dB or more
60-65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more

Source: Federal Interagency Committee on Noise (FICON)

Based on the Table 1 data, an increase in the traffic noise level of 3.0 dB or more would be significant where the pre-project noise levels are within 60-65 dB L_{dn} . Extending this concept to higher noise levels, an increase in the traffic noise level of 1.5 dB or more may be significant where the pre-project traffic noise level exceeds 65 dB L_{dn} . The rationale for the Table 1 criteria is that, as ambient noise levels increase, a smaller increase in noise resulting from a project is sufficient to cause annoyance.

It should be noted that this methodology was adopted by Shasta County in General Plan noise policy N-g. The City of Redding has also adopted this policy in General Plan noise policy N2-D, with one exception. Based upon Policy N2-D, the City does not consider an increase up to 60 dB L_{dn} to be significant where existing noise levels are less than 60 dB L_{dn} . For example, based upon this policy, an increase in ambient noise levels from 50 dB L_{dn} to 59 dB L_{dn} would be less than significant.

Off-Site Traffic Noise Prediction Methodology

To predict noise levels due to traffic, the Federal Highway Administration's Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used. The model is used in conjunction with the Calveno reference noise emission curves, and accounts for vehicle volume and speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the project site. The FHWA Model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To calculate L_{dn} , average daily traffic (ADT) volume data is adjusted based on the assumed day/night distribution of traffic on the project roadways.

Traffic volumes for existing conditions were obtained from the project traffic study the form of peak hour intersection movements. The peak hour traffic volumes were compiled into segment volumes and converted into daily traffic volumes using a factor of 10, according to common industry practice. Truck usage and vehicle speeds on the local area roadways were estimated from field observations and Caltrans data, where available.

Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each project-area roadway segment. It should be noted that traffic noise levels also include the contribution to overall traffic noise levels from Interstate 5 and S. Bonnyview Road which are dominant noise sources near the surface streets analyzed in the report. This analysis includes assessment of both opening year and cumulative 2040 traffic conditions.

Table 2 summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area under existing conditions with and without the project. Table 3 summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area under Cumulative 2040 conditions with and without the project.

Appendix A provides the complete inputs and results of the FHWA traffic modeling.

TABLE 2: PREDICTED TRAFFIC NOISE LEVELS (EXISTING CONDITIONS WITH AND WITHOUT THE PROJECT)

Roadway	Segment	Existing Ambient, dBA L _{dn}	Opening Year		Opening Year + Project		Change		Significance Threshold	Significant increase?
			Weekday Peak Hour [Daily ADT]	dBA L _{dn}	Weekday Peak Hour	dBA L _{dn}	Weekday Peak Hour [Daily ADT]	dBA L _{dn}		
Adra Way	North of Smith Road	58.4	6 ¹ [60]	58.4 ²	322 [3,220]	60.0 ³	316 [3,160]	+1.6	≥5 dBA	No
Bechelli Lane	South of South Bonnyview Road, Alt. A, Opt. 1	61.7	151 [1,510]	62.3 ⁴	1,290 [12,900]	65.2 ⁵	1,139 [11,390]	+2.9	≥3 dBA	No
Bechelli Lane	South Bonnyview Road, Alt. A, Opt. 2	61.7	151 [1,510]	62.3 ⁴	973 [9,730]	64.6 ⁶	822 [8,220]	+2.3	≥3 dBA	No
Bechelli Lane	South Bonnyview Road, Alt. B, Opt. 1	61.7	151 [1,510]	62.3 ⁴	1,051 [10,510]	64.8 ⁷	900 [9,000]	+2.5	≥3 dBA	No
Bechelli Lane	South Bonnyview Road, Alt. C, Opt. 1	61.7	151 [1,510]	62.3 ⁴	1,138 [11,380]	64.9 ⁸	987 [9,870]	+2.6	≥3 dBA	No

Notes:

- 1 - Adra Way is an unpaved private road that currently provides access to one residence. Because weekday peak hour traffic volumes were not available for Adra Way, a value of 6 vehicle trips per weekday P.M. peak traffic hour was conservatively assumed.
- 2 – Includes the existing ambient noise level of 58.4 dBA L_{dn} added to the Opening Year Adra Way contribution of 31.8 dBA L_{dn}.
- 3 – Includes the existing ambient noise level of 58.4 dBA L_{dn} added to the Opening Year + Project Adra Way contribution of 55.0 dBA L_{dn}.
- 4 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Opening Year Bechelli Lane contribution of 53.4 dBA L_{dn}.
- 5 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Opening Year + Project Alt. A, Opt. 1 Bechelli Lane contribution of 62.7 dBA L_{dn}.
- 6 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Opening Year + Project Alt. A, Opt. 2 Bechelli Lane contribution of 61.5 dBA L_{dn}.
- 7 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Opening Year + Project Alt. B, Opt. 1 Bechelli Lane contribution of 61.8 dBA L_{dn}.
- 8 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Opening Year + Project Alt. C, Opt. 1 Bechelli Lane contribution of 62.1 dBA L_{dn}.

TABLE 3: PREDICTED TRAFFIC NOISE LEVELS (CUMULATIVE 2040 CONDITIONS WITH AND WITHOUT THE PROJECT)

Roadway	Segment	Existing Ambient, dBA L _{dn}	Cumulative Year		Cumulative Year + Project		Change		Significance Threshold	Significant Increase?
			Weekday Peak Hour [Daily ADT]	dBA L _{dn}	Weekday Peak Hour	dBA L _{dn}	Weekday Peak Hour [Daily ADT]	dBA L _{dn}		
Adra Way	North of Smith Road	58.4	9 ¹ [90]	58.4 ²	325 [3,250]	60.0 ³	316 [3,160]	+1.6	≥5 dBA	No
Bechelli Lane	South of South Bonnyview Road, Alt. A, Opt. 1	61.7	191 [1,910]	62.4 ⁴	1,330 [13,330]	65.3 ⁵	1,139 [11,390]	+3.0	≥3 dBA	Yes
Bechelli Lane	South Bonnyview Road, Alt. A, Opt. 2	61.7	191 [1,910]	62.4 ⁴	1,013 [10,130]	64.7 ⁶	822 [8,220]	+2.4	≥3 dBA	No
Bechelli Lane	South Bonnyview Road, Alt. B, Opt. 1	61.7	191 [1,910]	62.4 ⁴	1,091 [10,910]	64.8 ⁷	900 [9,000]	+2.5	≥3 dBA	No
Bechelli Lane	South Bonnyview Road, Alt. C, Opt. 1	61.7	191 [1,910]	62.4 ⁴	1,178 [11,780]	65.0 ⁸	987 [9,870]	+2.7	≥3 dBA	No

Notes:

- 1 - Adra Way is an unpaved private road that currently provides access to one residence. Because weekday peak hour traffic volumes were not available for Adra Way, a value of 9 vehicle trips per weekday P.M. peak traffic hour was conservatively assumed.
- 2 – Includes the existing ambient noise level of 58.4 dBA L_{dn} added to the Cumulative 2040 Adra Way contribution of 33.6 dBA L_{dn}.
- 3 – Includes the existing ambient noise level of 58.4 dBA L_{dn} added to the Cumulative 2040 + Project Adra Way contribution of 55.0 dBA L_{dn}.
- 4 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Cumulative 2040 Bechelli Lane contribution of 54.4 dBA L_{dn}.
- 5 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Cumulative 2040 + Project Alt. A, Opt. 1 Bechelli Lane contribution of 62.8 dBA L_{dn}.
- 6 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Cumulative 2040 + Project Alt. A, Opt. 2 Bechelli Lane contribution of 61.6 dBA L_{dn}.
- 7 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Cumulative 2040 + Project Alt. B, Opt. 1 Bechelli Lane contribution of 62.0 dBA L_{dn}.
- 8 – Includes the existing ambient noise level of 61.7 dBA L_{dn} added to the Cumulative 2040 + Project Alt. C, Opt. 1 Bechelli Lane contribution of 62.3 dBA L_{dn}.

Conclusions

Based upon the predicted traffic noise increases shown in Table 2 and Table 3, the proposed project is predicted to cause increased traffic noise on Bechelli Lane South of S. Bonnyview which would exceed the impact threshold of 3 dBA, or greater. This impact would specifically occur under project Alternative A, Option 1 under Cumulative 2040 plus project conditions. The only sensitive receptor along this roadway segment is the Hilton Garden Inn hotel which includes an outdoor swimming pool area. In order to reduce this traffic noise increase to below 3 dBA, a solid 6-foot tall sound wall would be required to be constructed along the north side of the pool. Based upon the Appendix B data, the barrier would reduce overall noise levels by 6 dBA. This reduction would result in plus projects traffic noise levels which are less than the no project noise levels. Therefore, no additional noise control measures would be required after construction of the noise barrier. This measure would only be required under Alternative A, option 1.

No other exceedances of either the Shasta County or City of Redding significant increase thresholds are predicted for any other segments or project alternatives.

Please call or email me if you have any questions regarding this analysis.

Sincerely,

Saxelby Acoustics

SECTION 1.0

INTRODUCTION

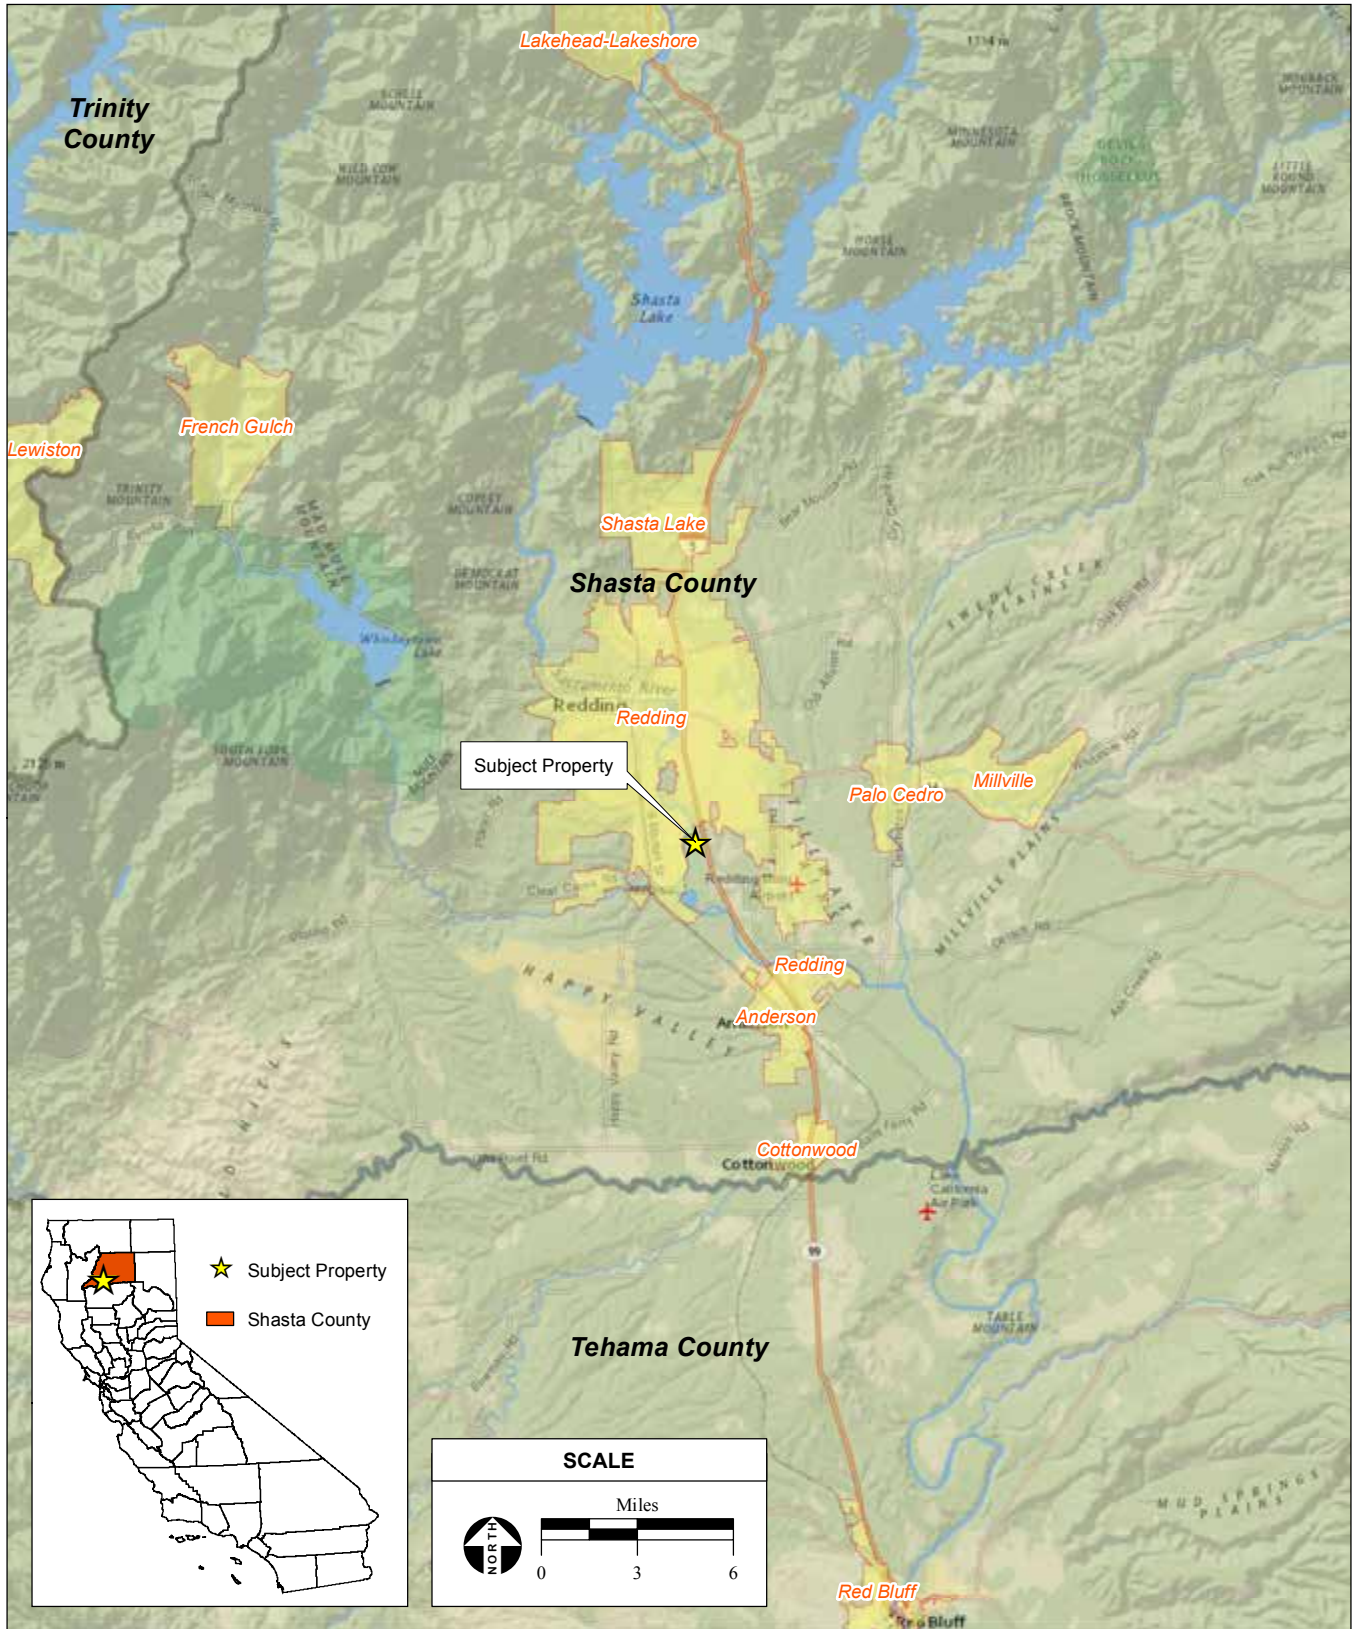

1.1 PURPOSE

This Phase I Environmental Site Assessment (Phase I ESA) has been prepared in conformance with the American Society for Testing and Materials (ASTM) Standard Practice E 1527-13, which specifies the appropriate inquiry requirement for the innocent landowner defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This Phase I ESA encompasses the 232-acre property located within unincorporated Shasta County (County), California, immediately south of the City of Redding, California (**Figure 1**) and encompasses Assessor's Parcel Numbers (APN) 055-010-011, 055-010-012, 055-010-014, 055-010-015, 055-020-001, 055-020-004, and 055-020-005. As such, the use of the term "Subject Property" refers to the property totaling 232 acres, unless otherwise stated. The purpose of this assessment is to identify Recognized Environmental Conditions (RECs) that may affect future uses of the Subject Property.

This Phase I ESA covers the Subject Property and surrounding known sources of contamination, up to 1.0 mile from the Subject Property. A site reconnaissance inspection of the Subject Property and adjacent properties was performed, and relevant database listings of hazardous materials sites, waste generators, and underground storage tanks (USTs) were reviewed (EDR, 2016). Additionally, historical topographic maps and aerial photographs for the Subject Property were reviewed.

1.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The term REC refers to the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Additionally, the term Historical Recognized Environmental Conditions (HREC) refers to an environmental condition associated with the Subject Property, including a past release of any hazardous substance or petroleum product that has since been remediated, which in the past would have been considered a REC. This Phase I ESA additionally includes the analysis of the presence of Controlled Recognized Environmental Conditions (CREC), for hazardous substance releases that have been partially addressed through remediation, but where some contamination remains in place under certain risk-based restrictions or conditions. HRECs and CREC are included in this Phase I ESA (ASTM, 2013).

Redding Rancheria Strawberry Fields Site Phase I ESA / 214584 ■

Figure 1
Regional Location

1.3 LIMITATIONS AND EXCEPTIONS

No Phase I ESA can completely eliminate uncertainty regarding the potential for RECs in connection with a property. Conformance of this assessment with ASTM Standard Practice E 1527-13 will reduce but not eliminate uncertainty regarding the potential for RECs in connection with the Subject Property. While every effort has been made to discover and interpret available historical and current information on the property within the time available, the possibility of undiscovered contamination remains. This report is a best-effort collection and interpretation of available information consistent with industry standards for the completion of Phase I ESAs.

This Phase I ESA is based on a site reconnaissance of the Subject Property, a visual reconnaissance of adjacent properties, and searches of government hazardous materials databases. Physical testing of soil or groundwater was not within the scope of this assessment. Asbestos containing building materials (ACM) and lead-based paint surveys were not included. Information was obtained for this Phase I ESA to comply with current ASTM guidelines.

1.4 METHODOLOGY

A variety of data sources were consulted in completing this Phase I ESA. The following sub-sections describe the methods used and the data sources consulted to accomplish each task.

1.4.1 HISTORICAL REVIEW

Previous land uses and history of the Subject Property were researched in an effort to identify RECs at or near the Subject Property. Historical aerial photographs (**Appendix A**) and topographic maps (**Appendix B**) from different decades were examined for the presence of aboveground storage tanks, industrial buildings, gas station canopies and/or pump islands, as well as other indications of bulk hazardous material storage within the study area. Sanborn Fire Insurance Maps document historical property use through abbreviations and map symbols that identify commercial, residential, industrial, residential and other land uses. The Subject Property is unmapped through the Sanborn Fire Insurance Maps. A letter of unmapped area is attached with the Sanborn Report. The City Database Directory was consulted to ascertain previous land uses of the Subject Property (**Appendix D**).

1.4.2 DATABASE SEARCHES

Database searches were conducted for records of known storage tank sites and known sites of hazardous materials generation, storage, and/or release. Available information from federal, state, and local agency lists consists of: (a) known or potential hazardous waste sites and landfills; (b) sites currently under investigation for environmental violations; (c) sites which manufacture, generate, use, store, and/or dispose of hazardous materials or hazardous wastes; (d) sites which have USTs and/or above-ground storage tanks (ASTs); and (e) sites with recorded violations of regulations concerning USTs and hazardous materials/hazardous wastes. The database search is intended to identify facilities that may have the

potential to impact surface and subsurface conditions on the Subject Property. A full listing of sites within the vicinity of the Subject Property is provided in **Appendix E**.

1.4.3 SITE RECONNAISSANCE

Katherine Green of AES conducted a reconnaissance inspection of the Subject Property and adjacent properties on December 22, 2016. The purpose of the site reconnaissance is to examine the Subject Property for obvious physical indications of improper hazardous substance or evidence of petrochemical disposal, such as stained soil, stressed vegetation, sumps, partially buried drums, bulk underground and aboveground fuel storage tanks, and other obvious signs of hazardous materials involvement. In addition, adjacent properties were visually inspected to the extent possible without trespassing on private property to determine if current land uses would affect the planned uses of Subject Property.

1.5 DEVIATIONS AND DATA GAPS

ASTM Standard E 1527-13 requires any significant data gaps, deviations, and deletions from the ASTM Standard to be identified and addressed in the Phase I ESA. A significant data gap would be one that affected the ability to identify a REC on the Subject Property or adjacent properties.

Due to the location of the Subject Property, Sanborn Fire Insurance Maps were not available for review. However, aerial photographs and historic topographic maps were available for review of previous uses of the Subject Property. Thus, the lack of Sanborn Fire Insurance Maps is not considered a significant data gap for this Phase I ESA.

1.6 CREDENTIALS

Analise Rivero prepared this report under the professional supervision of David Zweig, P.E., who qualifies as an environmental professional (EP) as defined in the ASTM Standard E 1527-13 [40 CFR §312.10(b)]. Resumes for Analise Rivero, Katherine Green, and David Zweig are included as **Appendix H**.

SECTION 2.0

SITE DESCRIPTION

2.1 LOCATION AND LEGAL DESCRIPTION

The Subject Property is located in unincorporated Shasta County (**Figures 2 and 3**), immediately south of the City of Redding. The Subject Property encompasses seven parcels (Shasta County APNs 055-010-011, 055-010-012, 055-010-014, 055-010-015, 055-020-001, 055-020-004, and 055-020-005) totaling 232 acres.

2.2 SITE AND VICINITY CHARACTERISTICS

The 232-acre Subject Property is currently undeveloped and mostly unimproved, with the exception of cattle fencing and several dirt roads that traverse the property. Portions of the site have formerly been used for irrigated row crops, and the property is now used as grazing land.

The Strawberry Fields Site is situated on a relatively level terrace above the Sacramento River. Overall, Strawberry Fields slopes gently downward to the south, though the lowest point lies near the center. The western site boundary is an almost vertical embankment above the Sacramento River; on-site elevations range from approximately 440 to 454 feet above mean sea level (amsl).

Regional access to the Strawberry Fields Site is provided by I-5, and local access is provided by South Bonnyview Road and Bechelli Lane.

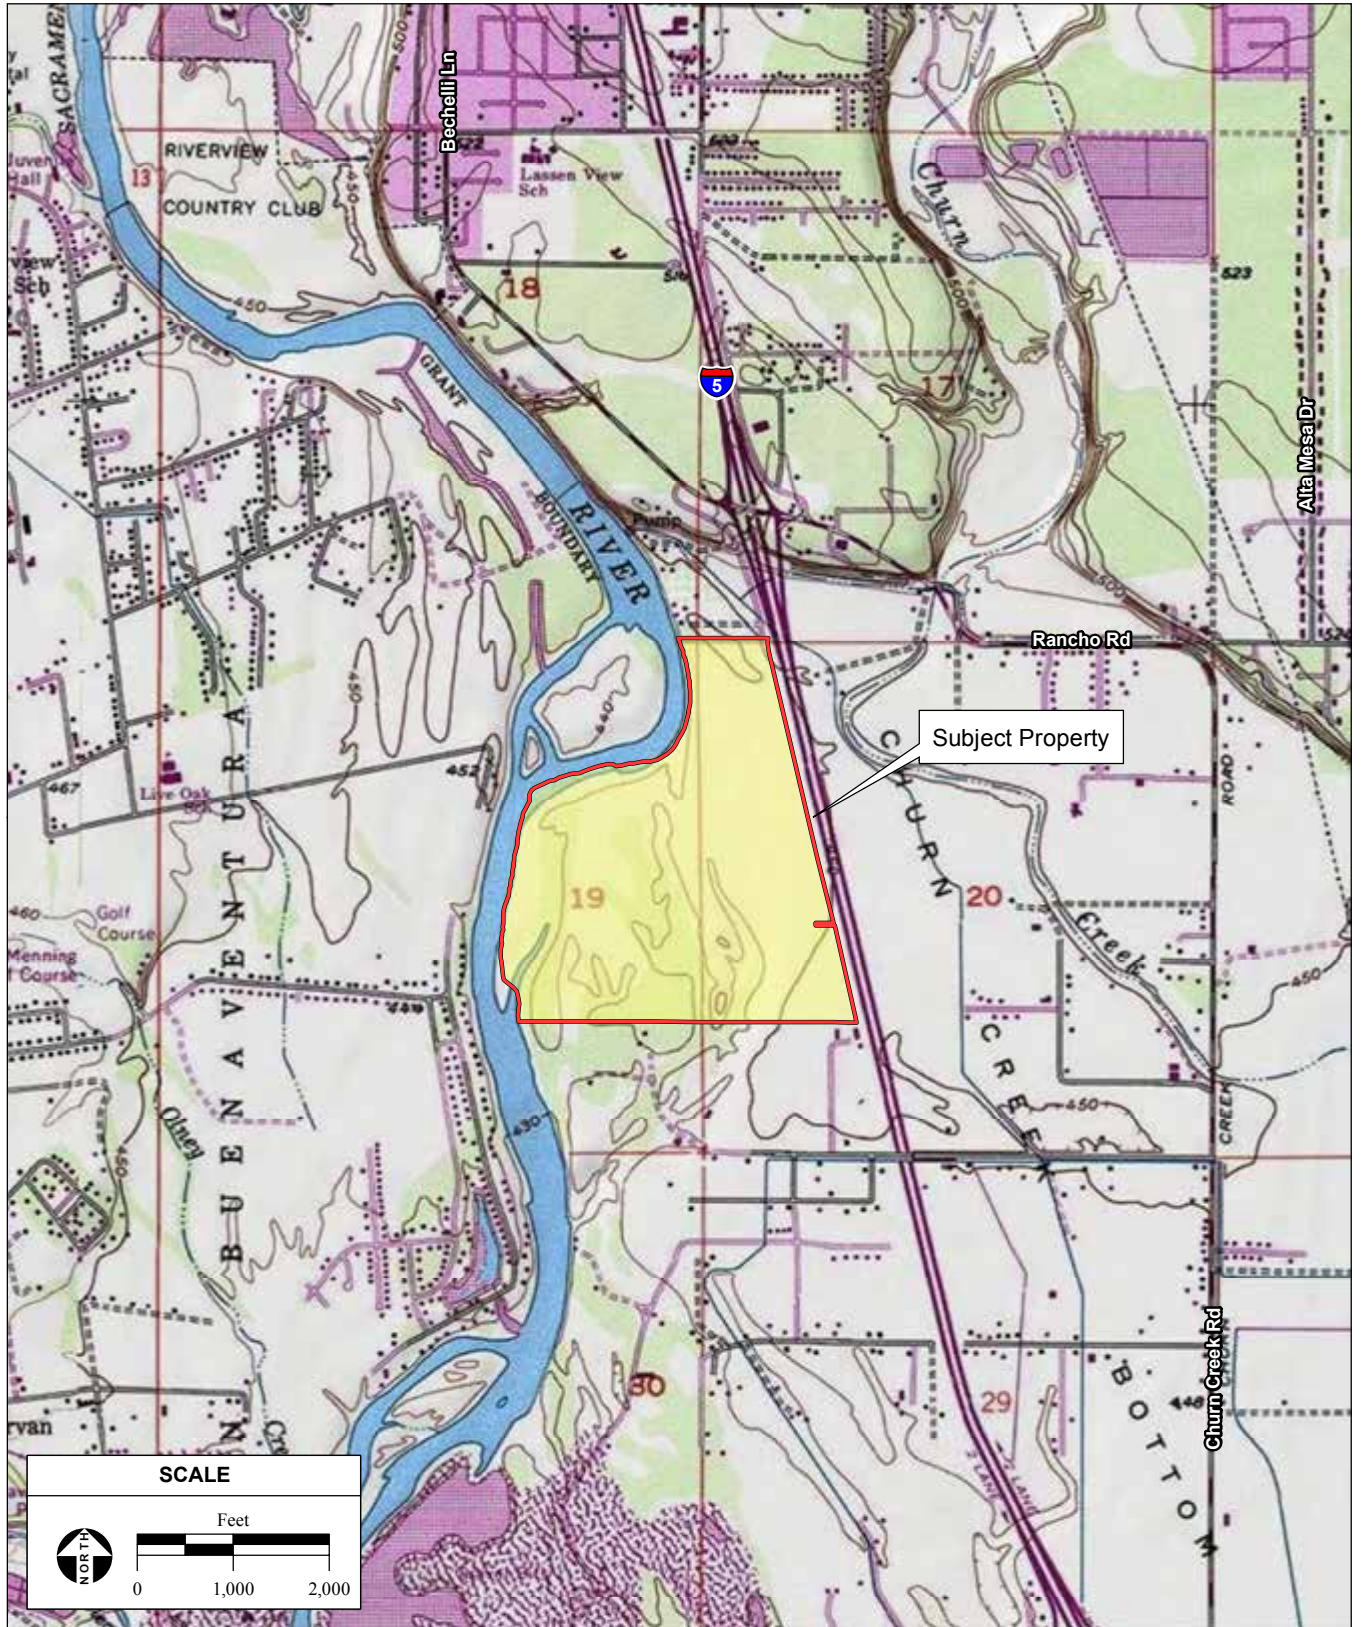

2.3 LOCAL ENVIRONMENTAL RECORDS SOURCES

2.3.1 LOCAL ENVIRONMENTAL AGENCY

The Environmental Database Research, Inc. (EDR) report (**Appendix E**), the California State Water Resources Control Board (SWRCB), and the Department of Toxic Substances Control (DTSC) EnviroStor databases (SWRCB, 2017; DTSC, 2017) provided search and documentation of local hazardous materials data (**Appendix E**).

2.3.2 COMMUNITY DEVELOPMENT DEPARTMENT

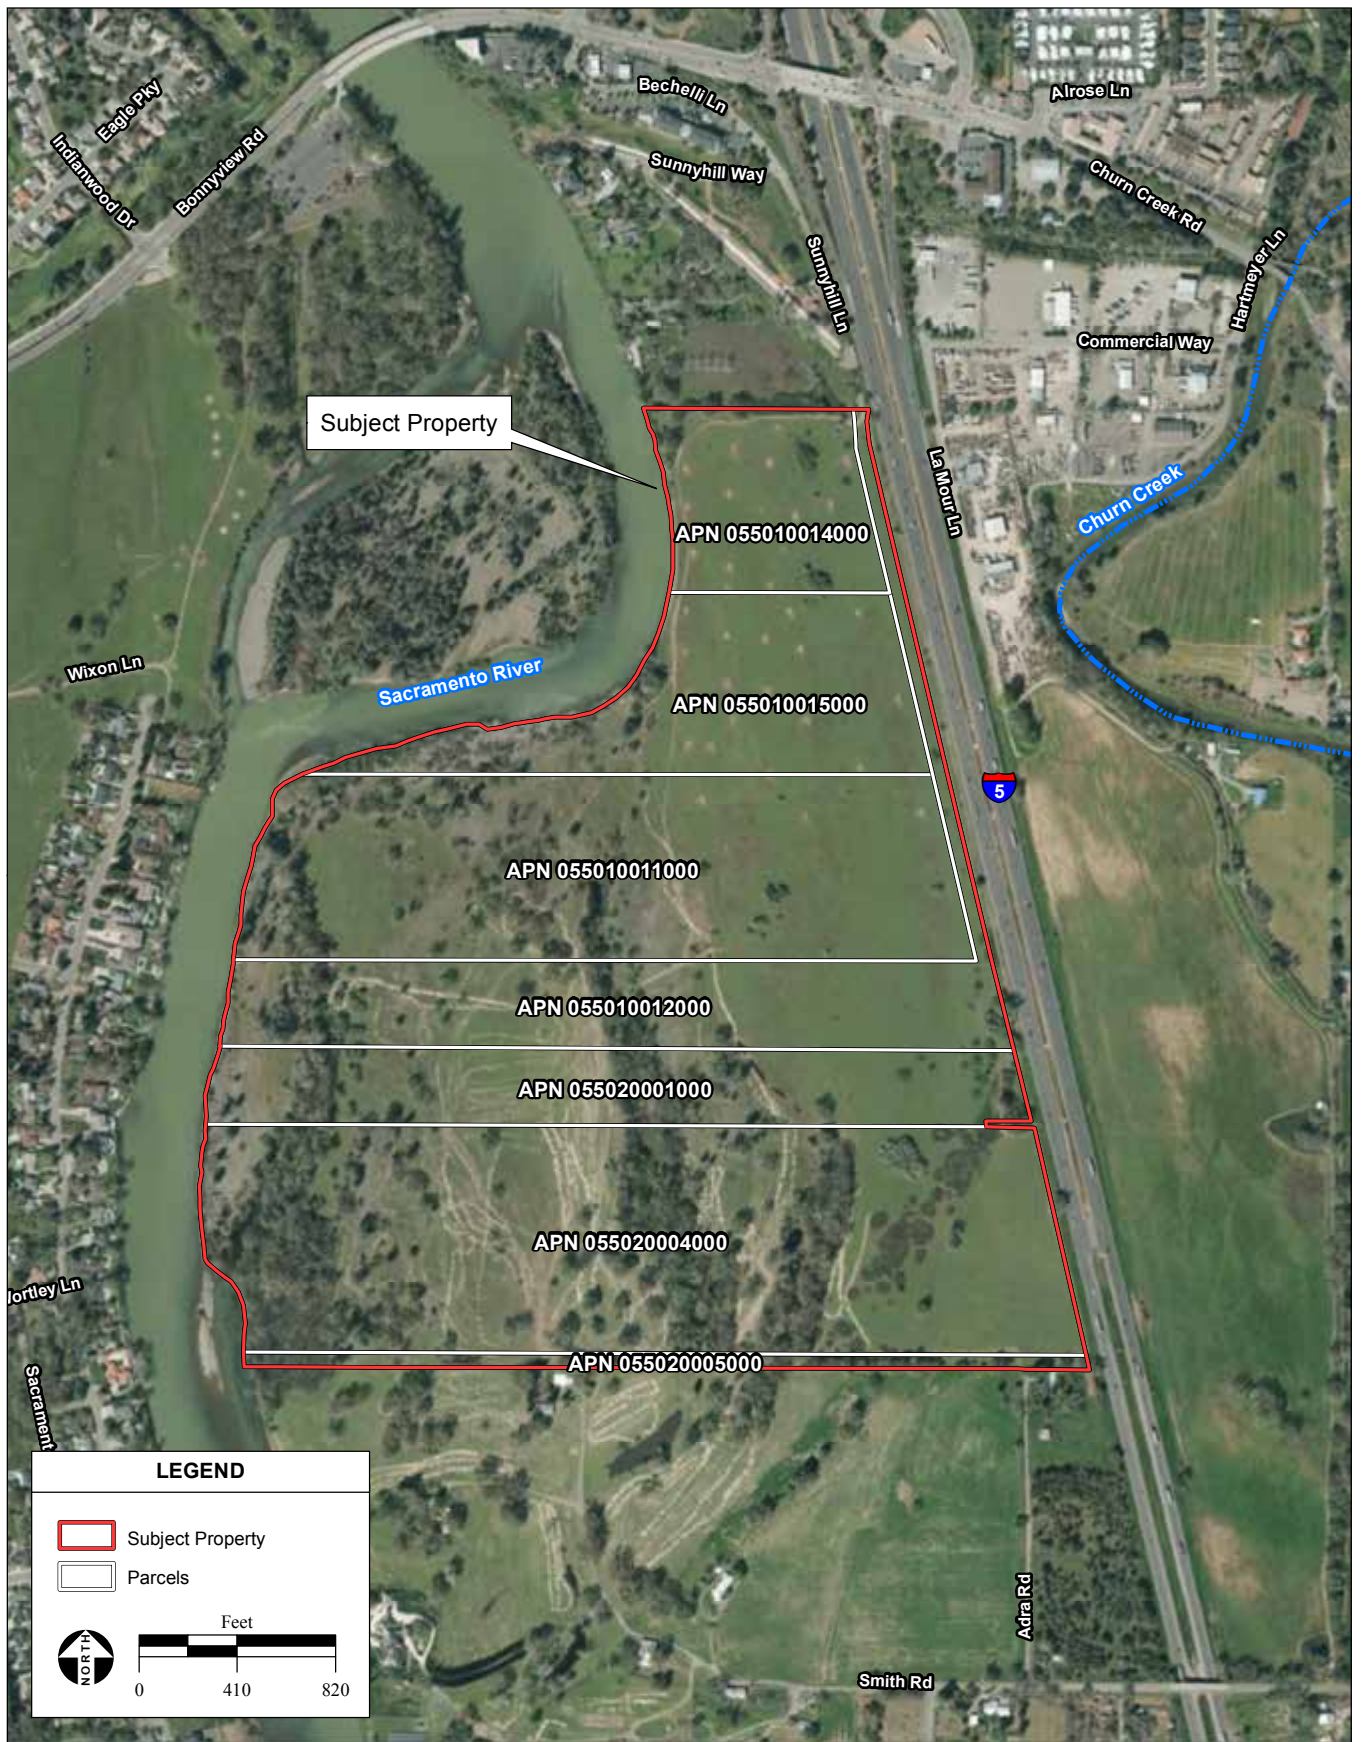

Zoning designations on the Subject Property were reviewed through information provided Shasta County. The majority of the Strawberry Fields Site is zoned by the County as Limited Agriculture (A-1), with a small sliver of land adjacent to the Sacramento River zoned as Designated Floodway (F-1; Shasta County, 2013). The Subject Property is not under a Williamson Act contract (Department of Conservation, 2016).

Figure 3
Aerial Photograph

2.3.3 ELECTRICAL UTILITY COMPANY

The Subject Property does not currently receive electricity; however, Redding Electric Utility provides service to the vicinity. Electrical poles line the northern boundary of the Subject Property and a transformer exists in the northwestern corner.

2.4 HYDROLOGY

Stormwater runoff from the Subject Property is generally sheet flow with a convergence towards the site's western border adjacent to the Sacramento River. However, the topography is gently rolling with drainages oriented generally north-south.

2.5 GEOLOGY AND SOIL

The rock stratigraphic unit of the Subject Property is of the Cenozoic era, Quaternary system, and Quaternary series (**Appendix E**). The dominant soil on the Subject Property is Reiff fine sandy loam (Class B). Reiff fine sandy loam is moderately well drained and the Class B hydrologic soil group has a moderate infiltration rate (**Appendix E**). The Subject Property is approximately 11 miles north of the Battle Creek Fault.

2.6 CURRENT USES OF THE SUBJECT PROPERTY

The Subject Property is currently being used for seasonal cattle grazing. The Subject Property is primarily non-native annual open grassland. Site photos showing the conditions on the Subject Property during the site visit are shown in **Figure 4** of **Section 3.0** below.

2.7 HISTORIC USES OF THE SUBJECT PROPERTY

2.7.1 AERIAL PHOTOGRAPHS

Available historic aerial photographs (**Appendix A**) were reviewed for information regarding past uses of the Subject Property and surrounding areas. The following aerial photographs were available for review: 1943, (1"=750'), 1955 (1"=750'), 1963 (1"=750'), 1969 (1"=750'), 1976 (1"=750'), 1999 (1"=500'), 2005 (1"=500'), 2006 (1"=500'), 2009 (1"=500'), 2010 (1"=500'), and 2012 (1"=500'). Aerial photographs were of varying scale and clarity. Historical aerial images offer review of previous land uses on the Subject Property and adjacent properties. From the first available aerial in 1943, surrounding land uses appear to be agricultural and open space. A housing development to the west of the Sacramento River becomes visible on the 1963 aerial. On the 1969 aerial, I-5 becomes visible adjacent to the eastern boundary of the Subject Property. An increase in agricultural development in the vicinity is visible up until the 1976 aerial. The 2005 through 2012 aerials show similar attributes to the current condition of the Subject Property.

2.7.2 HISTORIC TOPOGRAPHIC MAPS

Available historic USGS Topographic Quadrangles (**Appendix B**) were reviewed for information regarding past uses of the Subject Property. The 1901, 1944, 1946, 1957, 1969, and 2012 Redding Quadrangle topographic maps as well as the 1957, 1969, and 2012 Enterprise Quadrangle topographic maps were available for review of the Subject Property. All of the topographic maps indicate a rural and agricultural setting immediately surrounding the Subject Property. Scattered rural development in the vicinity of the Subject Property appears on the 1957 topographic map. In the 1969 topographic map, I-5 becomes clearly visible along the eastern boundary of the Subject Property. All maps show that the Subject Property is completely undeveloped as no buildings or driveways are indicated on the maps.

2.8 SANBORN FIRE INSURANCE MAPS

Due to its rural nature, the Subject Property is not mapped through the Sanborn database. A certified complete database search was completed and is attached as **Appendix C**.

2.9 OTHER PHYSICAL SETTING SOURCES

2.9.1 WETLANDS MAP

Approximately 2.19 acres of wetland exist in the center of the Subject Property, categorized by the National Wetlands Inventory as Freshwater Pond (USFWS, 2017). Approximately 1.56 acres of Freshwater Forested/Shrub exist in the southeast of the Subject Property and 2.23 acres of Freshwater Emergent Wetland lies just outside the southern boundary of the Subject Property (USGWS, 2017)

2.9.2 FLOODPLAIN MAP

The eastern portion of the Subject Property, with the exception of the far southeast corner, is within the FEMA 500-year floodplain, while the majority of the western portion of the Subject Property is within the 100-year floodplain (FEMA, 2011a; FEMA 2011b). A copy of the regional floodplain map is included in **Appendix F**.

SECTION 3.0

SITE RECONNAISSANCE AND INTERVIEWS

3.1 OBJECTIVE

The objective of the site reconnaissance is to identify current or historic hazardous materials involvement on the Subject Property or in the vicinity of the Subject Property. Hazardous materials involvement or signature environmental conditions include the presence or likely presence of any hazardous materials or petroleum products that indicate an existing release, past release, or a threat of release into any structure on the property, soil, or groundwater. Signs of possible hazardous materials involvement would include any indications of USTs existing on the Subject Property; stained soils and/or unusual odors originating from the Subject Property; indications of any excavation or removal of soils, including patched asphalt and large debris piles; and other obvious signs of hazardous materials involvement.

3.2 SITE RECONNAISSANCE FINDINGS

A site reconnaissance of the Subject Property was performed by Katherine Green of AES on December 22, 2016. Adjacent properties were observed to the extent possible without trespassing. **Figure 4** provides photographs that show the site conditions at the time of the site visit. Notable features and environmental conditions are summarized below:

- A portion of an underground piping system was visible in the northwest corner of the Subject Property (**Photo 1**).
- A concrete water distribution structure no longer in use was visible in the northwest corner of the Subject Property (**Photo 2**). Limited scattered debris was visible alongside the concrete structure (**Photo 3**). A close-up view of the concrete encased rusted piping associated with the concrete water distribution structure is available in **Photo 4**.
- A dilapidated sheet metal structure along the northwestern boundary of the Subject Property was partially collapsed along the bank of the Sacramento River (**Photo 5**).
- Electrical boxes associated with the onsite transformer were visible along the northwestern boundary of the Subject Property (**Photo 6**). The transformer and the soil beneath showed no evidence of leakage or contamination.
- No hazardous materials were observed to be leaking or spilled to the ground.

PHOTO 1: Portion of underground piping system visible in the northwest corner of the Subject Property.

PHOTO 2: Concrete water distribution structure in the northwest corner of the Subject Property.

PHOTO 3: Rusty water pipe encased with concrete and scattered debris along the Sacramento River in the northwestern corner of the Subject Property.

PHOTO 4: Rusty water pipe encased with concrete along the Sacramento River in the northwestern corner of the Subject Property.

PHOTO 5: Rusty sheet metal structure collapsed onto bank of Sacramento River on northwestern corner of Subject Property.

PHOTO 6: Electrical boxes associated with transformer along northwestern corner of Subject Property.

3.3 ADJACENT PROPERTIES

A survey of adjacent properties was performed to the extent possible without trespassing during the December 22, 2016 site visit. The purpose was to identify adjacent businesses and determine if current land uses would affect the planned use of the Subject Property. Adjacent land uses are described below.

- North: Rural residential housing, Sunnyhill wastewater pump station, and Hilton Garden Inn
- South: Rural residential housing and agriculture
- West: Sacramento River
- East: I-5 and agriculture

3.4 INTERVIEWS AND QUESTIONNAIRES

Standard property owner and user questionnaires were sent out and are included as **Appendix G**.

DRAFT

SECTION 4.0

RECORDS REVIEW

4.1 DATABASE SEARCH

Database searches were conducted for records of known storage tank sites and known sites of hazardous materials generation, storage, and/or contamination. Databases were searched for sites and listings up to 1.0 mile from the perimeter of the Subject Property. The environmental database review was accomplished by using the services of a computerized search firm, EDR. EDR uses a geographic information system to plot locations of past or current hazardous materials involvement. The EDR report was reviewed to determine if the Subject Property and adjacent sites are listed on regulatory agency databases. The purpose is to determine if adjacent sites contain REC that would impact surface and/or subsurface conditions on the Subject Property. Included in the EDR database report is a list of “unmapped sites.” No unmapped sites are listed in the EDR report for the Subject Property. The complete list of reviewed databases is provided in the EDR report, included in **Appendix E**, and is summarized in **Table 4-1**. In addition, the information on past and/or current hazardous material involvement relating to adjacent properties is summarized in **Section 4.2.2**.

4.2 HAZARDOUS MATERIALS INVOLVEMENT

A regulatory agency database search was performed to identify locations of past and/or current hazardous materials involvement. Regulatory agency databases were searched for records of known storage tank sites and known sites of hazardous materials generation, storage, or contamination, or where violations pertaining to storage, use, or disposal of hazardous materials have occurred. Databases were searched for sites and listings up to 1.0 mile from the perimeter of the Subject Property. Although a site may be listed within the database report, this does not mean the site is currently contaminated or will impact the

environmental quality of the Subject Property and would be considered a REC. It should be noted that the database search is only as accurate as the data entered into the government agency-maintained databases and the date on which those databases were last updated. Installation of USTs or hazardous material releases, if not reported to the appropriate agency, would not be listed on any of the databases searched.

4.2.1 SUBJECT PROPERTY

The Subject Property is not listed on any database through the EDR system or SWRCB.

Previous Environmental Investigations

A Phase I ESA of the Subject Property was conducted in December 2009 by Sharrah Dunlap Sawyer, Inc. In addition to the site reconnaissance, a historical review was conducted to identify RECs associated with previous land uses, and database searches were conducted for records of known hazardous material generation, storage, or disposal sites in the vicinity of the Strawberry Fields Site. The report concluded that “[i]nformation obtained during the performance of this Phase I ESA has not revealed any evidence of recognized environmental conditions in connection with the subject site” (Sharrah Dunlap Sawyer, 2009). Additionally, the Subject Property was previously used for strawberry growing operations focused on the plant instead of the fruit (Sharrah Dunlap Sawyer, 2009). Accordingly, limited pesticides were used, and the fungicides that were used are not considered persistent in the environment. Fumigants typically applied during strawberry production are methyl bromide and chloropicrin, which are applied under a tarp and escape to the air once the tarp is removed. Use of these chemicals is not considered a hazardous materials contamination nor an REC (Sharrah Dunlap Sawyer, 2009).

4.2.2 ADJACENT PROPERTIES

Due to the location of the Subject Property, a 48 listed properties are within a 1.0 mile radius (Appendix E). These database listings included sites found on the U.S. Environmental Protection Agency (USEPA) National Priorities List (1 listed site), USEPA Engineering Controls Sites List (1 listed site), USEPA Resource Conservation and Recovery Act - for Hazardous Waste Generators (small quantity generators [SQG]) (1 listed site), USEPA Sites with Institutional Controls List (1 listed site), LUST database (7 listed sites), Aboveground Storage Tank database (5 listed sites), Certified Unified Program Agency (CUPA) Resources List (9 listed sites), among others. However, a listing within a database does not necessarily mean a hazardous materials release occurred at the listed property.

Three open cases and two closed cases within 1.0 mile of the Subject Property were listed in the EDR Report or SWRCB database and are discussed below.

The **Anderson Cottonwood Disposal Site** is approximately 900 feet northeast of the Subject Property, across I-5. This site is a closed leaking underground storage (LUST) case. The site formerly operated as a diesel refueling facility that was constructed in the 1970s. On December 22, 1998, petroleum contamination of soil was discovered upon excavation of two 10,000-gallon USTs. Four monitoring wells were installed

to facilitate groundwater sampling. In July 2000, total petroleum hydrocarbons as diesel fuel (TPHd) were detected at all four monitoring wells. Soil excavation took place from October 30, 2000 to April 19, 2001. Soil was disposed at the Altamont Class II Landfill. Since remediation, neither TPHd nor any other volatile or semi-volatile organic compounds have been detected in the monitoring wells. The CVRWQB recommended closing the case in a letter dated February 20, 2002 (CVRWQB, 2002), stating, “The site poses no threat to human health or safety or anticipated future beneficial use of water.” A No Further Action letter dated May 1, 2003 was issued confirming completion of a site investigation and necessary corrective action (CVRWQB, 2003). As no further groundwater contamination has been found and remediation is complete, this site is not an environmental threat to the Subject Property and is not considered a REC.

The **Viking Freight Systems Site** is approximately 1,050 feet northeast of the Subject Property across I-5. This site is a closed LUST case. A diesel to soil leak was discovered and stopped on August 15, 1995. Remedial action was taken and the CVRWQB issued a No Further Action letter on December 9, 1997 (CVRWQB, 1997). As the leak was limited to soil contamination and the case was closed, this site is not an environmental threat to the Subject Property and is not considered a REC.

The **5101 Churn Creek Site** is an open LUST case approximately 1,159 feet northeast of the Subject Property. Although currently vacant, 5101 Churn Creek Road was formerly a gasoline service station, in operation from 1967 until 2004. In 1977, an undocumented release of an unknown volume from the south end of the site was reported by the station manager. The release contaminated a well and septic system on a property south of the site and gasoline odors were reported by the residence. In 1986, in response to the undocumented release, the site’s original USTs were replaced with four double-walled gasoline and waste oil USTs. Upon removal, the USTs were reported in good condition based on low to non-detectable hydrocarbon concentrations in the soil samples. The engineering company recommended that no further action was necessary at the site, which was approved by the Shasta County Health Services Agency, Department of Public Health (Public Health Department) in 1987.

Four additional soil and groundwater investigations occurred between 1987 and 2004, all resulting in no further action. However, in February 2004, Phillips 66 issued a due diligence site assessment that resulted in the submittal of a UST Unauthorized Release/Site Contamination Report. Accordingly, the Public Health Department requested a work plan to further investigate groundwater impacts. In 2005 all USTs and pipelines were removed and reported in good condition, and therefore were not considered the source of contamination. In 2009, a Work Plan for Additional Soil and Groundwater Investigation was initiated and five groundwater monitoring wells were installed. Concentrations of petroleum hydrocarbons in the soil samples were found to be low to mostly non-detected in the laboratory reporting limits. As a result, the Public Health Department approved a monitoring reduction frequency from quarterly to semi-annual. Additionally, in 2014, soil sample concentrations for all constituents were less than the California Human Health Screening Level values. However, results of 2015 soil samples revealed a previously unidentified mass of methyl tertiary butyl ether (MTBE) in the soil (ATC, 2016).

The groundwater flows toward the south at a hydraulic gradient of 0.075 (ATC, 2016). However, groundwater model estimates estimate that contamination is not crossing to the western side of I-5 nor is it entering the Sacramento River (Bergmann, 2017). Additionally, remediation plans are currently being developed in order to clean up the site. Therefore, due to the direction of the contamination flow, this site is not an environmental threat to the Subject Property and is not considered a REC.

The **Churn Creek Chevron Site** is an open LUST case approximately 1,370 feet northeast of the Subject Property. A gasoline leak was discovered in December 1998 and the case was closed in June 2000. However, the case was reopened in January 2013 following a review of case files. Based upon review, data indicates unauthorized release from a UST system may exist beneath the site (CVRWQB, 2017). Corrective actions are currently underway as directed by the Central Valley Regional Water Quality Control Board (CVRWQB). The case is currently in the site assessment phase and the extent of contamination has not been determined (SWRCB, 2017). Three groundwater monitoring wells and the original onsite well are sampled and recorded in semi-annual reports. According to the January 2016 Groundwater Monitoring Report, groundwater flow beneath the site is to the south-southeast, away from the Subject Property. Additionally, all wells except Monitoring Well 2 indicated that constituents are below detectable levels (SHN, 2016). According to the January 2016 Groundwater Monitoring Report, “The site well continues to be the primary impediment to site closure. The location of the site well, although cross gradient, is proximal to the former underground storage tanks and the area of highest groundwater impact.” Remediation plans are currently being developed in order to clean up the site. On February 9, 2017, CVRWQB issued a conditional concurrence with the proposed site investigation work plan. While the site itself shows limited contamination, due to the direction of the contamination flow and relative decrease of contamination levels in most monitoring wells, this site is not an environmental threat to the Subject Property and is not considered a REC.

The **Iron Mountain Mine (IMM) Site** is located approximately 8.5 miles northwest of the Subject Property at off Highway 299. IMM is a Superfund site where more than a dozen sulfide mines have been worked for silver, gold, copper, zinc, and pyrite. The site covers approximately 4,400 acres and involves discharge of acidic waters typically with a high content of heavy metals, referred to as acid mine drainage (AMD). The IMM contains a massive deposit of nearly pure sulfide and a large gossan. The sulfides and gossan were mined in open pits and underground openings from the 1860s until 1963 and was considered one of the largest copper mines in the United States during the early twentieth century (**Appendix E**).

Although the IMM is located approximately 8.5 miles northwest of the Subject Property, downstream reaches of the Sacramento River within 0.35 miles of the Subject Property are affected by the AMD.

In the early 1960’s, the Spring Creek Reservoir was developed as a mitigation measure for the AMD discharges. However, remedial investigation activities at IMM did not begin until 1983 and the site was placed on the National Priorities List (NPL) of the nation’s most contaminated sites. Additionally,

Remedial Investigation Reports and Endangerment Assessments were prepared to evaluate potential threats to the environment resulting from contaminants infiltrating the groundwater, surface water, and air (USEPA, 2013).

In order to reduce potential threats to the environment from the IMM, long-term remedies selected in five Record of Decisions (ROD) have been implemented. Remedies for the IMM consist of a combination of source control, acid mine drainage collection and treatment, water diversion, and coordinated releases of contaminated surface water. In the 2013 Five Year Review, the assessment determined that the remedies are operating as intended and the maintenance of the IMM has been satisfactory over the past five years. They remedial actions have eliminated 97 percent of the historical metal discharges from the IMM. Additionally water quality sampling of the Sacramento River, performed between 2008 and 2012, indicate that concentrations of copper, cadmium, and zinc comply with the Water Quality Control Plan for the Sacramento Basin and San Joaquin River Basin standards. Due to compliance with water quality standards, this site does not pose an threat to the environmental integrity of the Subject Property (USEPA, 2013).

The **City of Redding Sunnyhill Sewer Lift Station**, listed on the CUPA database, is approximately 500 feet north of the Subject Property. Diesel, a potential fire hazard, is stored at the Lift Station. However, there have been no recorded leaks at the site. Therefore, it does not pose a threat to the environmental integrity of the Subject Property and is not considered a REC (**Appendix E**).

SECTION 5.0

FINDINGS AND CONCLUSIONS

This Phase I ESA was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-13.

5.1 FINDINGS

Based on information gathered while conducting this Phase I ESA, the following environmental findings are provided:

- The Subject Property contains remnants of a concrete water distribution structure, associated concrete encased piping, a dilapidated sheet metal structure, electrical transformer, and limited scattered debris. The remainder of the Subject Property includes open fields and scattered oak trees.
- While the on-site debris are unlikely to pose a threat to the environmental integrity of the Subject Property, the dilapidated sheet metal structure and scattered debris should be removed from the Subject Property.
- During the site reconnaissance, no visible evidence of stained soils, odors, or past hazardous releases were observed within the Subject Property.
- No evidence of existing underground storage tanks was observed on the Subject Property.
- No Controlled Recognized Environmental Conditions (CRECs) or Historical Recognized Environmental Conditions (HRECs) have been identified on the Subject Property, and the site is not subject to control or use restriction related to hazardous materials involvement.
- Surrounding properties listed in the EDR report have been reviewed and found to not pose a threat to the environmental integrity of the Subject Property.

5.2 CONCLUSION

This Phase I ESA was prepared in conformance with the scope and limitations of ASTM Practice E 1527-13. Any exceptions to, or deletions from, this practice are described in **Section 1.0** of this report. Based on the site conditions during the December 22, 2016 site reconnaissance and information in the EDR report (**Appendix E**), no RECs were identified on or in the immediate vicinity of the Subject Property that would be likely to pose a significant impact to the environmental integrity of the Subject Property. No subsurface hazardous materials investigations of the property are recommended at this time.

SECTION 6.0

REPORT AUTHORS AND REFERENCES

The undersigned declare to the best of their professional opinion that they meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. Analise Rivero, Report Preparer, assembled this report under the professional supervision of David Zweig, Professional Engineer (P.E.), who qualifies as an environmental professional (EP) as defined in the ASTM Standard E1527-13, and have the specific qualifications based on education, training, and experience to assess a property of the nature, and setting of the Subject Property.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Analytical Environmental Serv. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Analytical Environmental Serv. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

EXECUTIVE SUMMARY

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
IRON MOUNTAIN MINE	OFF HWY 299 9 MI NW	W 1/4 - 1/2 (0.322 mi.)	0	8

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

IRON MOUNTAIN MINE	OFF HWY 299 9 MI NW	W 1/4 - 1/2 (0.322 mi.)	0	8

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 05/09/2016 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
IRON MOUNTAIN MINE	OFF HWY 299 9 MI NW	W 1/4 - 1/2 (0.322 mi.)	0	8

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 05/09/2016 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, has revealed that there are 7 LUST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Summary Details:

Conditions at listing October 1981): Iron Mountain Mine is a privately owned site in the Klamath Mountains of Shasta County, 9 miles northwest of Redding, California. The mine area, which encompasses about 2,000 acres, is drained by BoulderCreek and Slickrock Creek, both tributaries to Spring Creek. Spring Creek drains into Keswick Reservoir. Flat Creek, which also drains a portion of the site, enters Keswick Reservoir just upstream of Spring Creek. Keswick Reservoir was formed by the construction of Keswick Dam on the Sacramento River, which is a major source of Redding's drinking water. The State has estimated that a daily average of 2,350 pounds of iron, 300 pounds of copper, and 50 pounds of cadmium are carried into Keswick Reservoir from the site. Status July 1983): In February 1982, the State brought action against the present owners of the site. The action resulted in a default judgment against the company and fines totalling 16.8 million. In June and July 1982, the company filed motions to vacate the default judgments, which the Shasta County Superior Court denied. In August 1982, the company filed an appeal from the denials on its motion. One appeal is still pending. The company has reached a settlement with the State on the 16.8 million default judgment. CERCLA funding is being requested for a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action.

Site Description: The Iron Mountain Mine (IMM) Superfund site is located in Shasta County, California, approximately 9 miles northwest of the City of Redding. The collection of mines on Iron Mountain is known as Iron Mountain Mines. The Iron Mountain Mines are the southernmost mines in the West Shasta Mining District. The District encompasses more than a dozen sulfide mines that have been worked for silver, gold, copper, zinc, and pyrite. The IMM Site contains approximately 4,400 acres of land that includes the inactive mining properties on Iron Mountain; the several inactive underground and open pit mines; numerous waste piles; abandoned mining facilities; mine drainage treatment facilities; the downstream reaches of Boulder, Slickrock, Flat, and Spring Creeks; Spring Creek Reservoir; Keswick Reservoir (which includes both the Spring Creek Arm and the main body of Keswick Reservoir); and the Sacramento River affected by drainage from IMM. The summit of Iron Mountain is 3,583 feet above mean sea level and is approximately 3,000 feet above the Sacramento River, 3 miles to the east. The terrain is very steep, with slopes dropping 1 to 2 feet for every 2 feet horizontally, or steeper. The mountain is predominantly forested with some areas of brush and numerous unpaved roads leading to various work locations. Several and possibly all of the mines and the waste rock piles are discharging acidic waters typically with a high content of heavy metals.

These discharges are herein referred to collectively as "acid mine drainage" or AMD. The largest sources of AMD are located within the Iron Mountain Mine (IMM) property. The largest source of AMD is the Richmond Mine and the second largest is the Hornet Mine both of which drain into Boulder Creek. EPA has identified control of the AMD sources in the Boulder Creek drainage basin as a major step in the ultimate control of the contaminant discharges from Iron Mountain. EPA has designated the Boulder Creek basin as an Operable Unit for a Feasibility Study of pollution sources and alternative approaches for AMD control. This study has included the Richmond and Hornet Mines, waste piles, seeps, and sulfide-rich sediments within the basin. Iron Mountain contains a very large mass of nearly pure sulfide (massive deposit), several small massive sulfide deposits, several zones of disseminated sulfides, and a large gossan. The gossan is a zone of rock from which disseminated sulfides have been almost completely removed by natural solution leaving a residue of iron and other metals. The gossan has been mined by open pit for residual metals. The disseminated and massive sulfides have been mined in open pit and underground openings for copper, cadmium and zinc and for pyrite. The country rock at Iron Mountain is rhyolite. Commercial mining at Iron Mountain started in 1879 and continued with a few interruptions until 1963. In the early twentieth century, the site was one of the largest copper mines in the United States. Mineral extraction objectives and methods varied widely. In recent years, metal recovery activity at the site has been limited to extracting copper from the AMD using copper cementation. The adjacent land is largely undeveloped wilderness property that is currently infrequently visited because of the rugged topography and few roads. Offroad vehicles have been known to visit these areas and the U.S. Bureau of Land Management has notified EPA with regard to potential acquisition of adjacent lands for preservation as wilderness and enhancement for recreational use. The natural resources on the mining property and in the surface waters which flow on or adjacent to the mining property at one time included mature stands of timber, fish, and aquatic populations and sulfide minerals. The natural resources in the downgradient Sacramento River include the valuable Sacramento River fishery, recreational use of the river and Keswick Reservoir, and the valuable water resources which are a major component of the U.S. Bureau of Reclamation's water distribution system for the State. The timber on the IMM property has today been largely removed for timber sales. The timber stands were also extensively damaged by historic smelter operations in the early 1900s. The portions of Boulder Creek, Slickrock Creek, and Spring Creek impacted by AMD from IMM are essentially lifeless. A major portion of the sulfide minerals remain in the mines and in undeveloped areas. The sulfide minerals have not been attractive in recent years, and there is no verified proposal to mine these deposits in the near future. Spring Creek Reservoir was constructed in part as a mitigation measure for the AMD discharges and does not support aquatic life. It is not used for any recreational purpose. The portion of Keswick Reservoir impacted by IMM AMD has reduced recreational value, and the resident trout fishery is impacted by the heavy metal contaminants in the water column in the mixing zones, and the heavy sediment loadings due to the precipitation of iron and coprecipitation of heavy metals. The upper Sacramento River salmon fishery is the most important fishery in the State and has experienced large population declines over the past 20 years due to a number of factors, including IMM AMD impacts. The Sacramento River also supports a major steelhead trout and resident trout fishery. The water resources held in Shasta Lake by the U.S. Bureau of Reclamation (USER) as part of its Central Valley Project (CVP) are an important component of the water distribution system to a growing California's municipal and agricultural interests. CVP operations are today often constrained by the IMM AMD discharges in order that water quality conditions in the Sacramento River can be maintained within safe bounds for

IRON MOUNTAIN MINE (Continued)

1000305640

fishery protection. On occasion, the USER has released water from Shasta to dilute AMD which would otherwise have been used for beneficial purposes. Iron Mountain Mine is mainly remote from human populations because of the rugged terrain and the single access roadway. The mine owner has provided heavy metal gates which are locked at most times to discourage casual entry to the site. Human contact with the flows from Iron Mountain are mainly limited to the waters downstream of Spring Creek Debris Dam which includes Keswick Reservoir and the Sacramento River below Keswick Dam. The closest community is Keswick located just east of the site. Several isolated residences are between Keswick and the mine property. The City of Redding has a population of approximately 70,000 people and is located approximately 9 miles from the site. Local surface drainage includes Boulder Creek, located northeast of the mountain, and Slickrock Creek, located to the southwest. Boulder Creek and Slickrock Creek flow into Spring Creek. Spring Creek flows south and east to the Spring Creek Debris Dam (SCDD), from which the U.S. Bureau of Reclamation (USER) releases flow into the Sacramento River. Flat Creek drains an area to the east of Iron Mountain and enters the Sacramento River approximately 0.8 mile north of Spring Creek. Flat Creek also receives water from upper Spring Creek, as a result of a water diversion project constructed in 1990 as part of the CERCLA response at Iron Mountain. The Boulder Creek watershed encompasses 2.7 square miles. The headwaters of Boulder Creek begin at approximately 3,400 feet mean sea level (msl), and flow 3.7 miles to the confluence with Spring Creek at 1,400 feet msl. Boulder Creek receives water from several small tributaries, groundwater seeps, and discharges from the Richmond and Lawson Adits which drain the Richmond and Hornet mines. The estimated average daily flow at Boulder Creek's confluence with Spring Creek is 8.8 cubic feet per second (cfs) (4,000 gpm). Boulder Creek flows vary from essentially a trickle in the upper reaches of the creek during late summer to several hundred cubic feet per second during storm events. Approximately 60 percent (2.2 miles) of Boulder Creek is affected by past mine activities located in the lower Boulder Creek watershed (Figure 2). All identified AMD sources within the Boulder Creek Operable Unit are located in this area. The upper portion of Boulder Creek (1.5 miles) is not significantly affected by mining activities. The rainfall-runoff responsiveness of the Boulder Creek Operable Unit may vary significantly throughout storm events. The amount of runoff is dependent on antecedent moisture conditions, storm intensity, the vegetative cover, ground slope, length of distributing area, and geology. Surface runoff is transported from the basin to Spring Creek. Channel-invert slopes are often greater than 20 percent with well-defined creekbeds. Major storm events may cause a rapid rise in the water levels in Boulder Creek. The rhyolite country rock is a dense rock with two to three sets of joints and a number of faults. The rock blocks generally lack significant porosity and the low porosity of the rock mass is due to the joint/fault discontinuities. The presence of groundwater and its movement within the rock is largely controlled by the discontinuities. The massive sulfide deposits were largely isolated from the groundwater before mining because the joints generally do not extend from the country rock into the mineralized zone. Groundwater was present in the disseminated zones. Mine openings and cracking caused by ground movements induced by mining have opened large volume of massive sulfide to groundwater and increased groundwater access to the disseminated sulfide mineralization. The additional groundwater movement and increased circulation of air within the rockmass has greatly accelerated the process of sulfide dissolution and the formation of metal-rich acid drainage. Surface water and groundwater at Iron Mountain were previously used for mining operations and to provide water supply to the mine staff and their families. These resources are essentially unused today due to contamination from AMD. An open pit mine at Brick Flat, underground

IRON MOUNTAIN MINE (Continued)

1000305640

workings at Old Mine, No. 8, and the Confidence-Complex on the southern flank of the mountain, and the Richmond and Hornet Mines on the northern flank are the large mines on Iron Mountain. The mines on the north flank are shown schematically in Figure 3. The Richmond and Hornet Mines clearly affect water quality in the Boulder Creek valley and are of primary interest in this operable unit. Brick Flat Pit, the Confidence-Complex Mine and the Mattie Mine may also affect this operable unit in certain potential actions to control metals releases in the Boulder Creek valley. The Hornet Mine was accessed by the Lawson adit, which at its closest point runs almost directly below Boulder Creek, with the adit at approximately 2,200 feet elevation and Boulder Creek at approximately 2,285 feet elevation (Figure 4). The Lawson adit is currently inaccessible due to partial collapse. The Richmond Mine was accessed by two adits, an extension of the Lawson adit from the Hornet Mine workings, and later by the Richmond adit. The Lawson extension runs northeast approximately 400 feet below the floor of the Richmond Mine into the Lawson adit below the Hornet Mine, and then turns southeast parallel with Boulder Creek for approximately 2,000 feet. The Richmond adit runs from the haulageway level at the base of the Richmond Mine workings east at an elevation of approximately 2,600 feet. A third connection to the Richmond Mine is through the Confidence-Complex adit, which exits the south side of the mountain above Slickrock Creek. Two 400-foot-high raises from the Richmond Mine workings intercept the Confidence-Complex adit at Elevation 3007. The Richmond Mine workings consist of 23 large and several smaller mined-out areas within the Richmond mineralized zone. Most of these openings are stopes as they were mined from the bottom by roof caving. In the innermost portions of the mine, the ore was excavated using a room-and-pillar configuration instead of large stopes. Most of the larger stopes have apparently collapsed. The 10- to 15-acre surface area above the Richmond Mine contains several subsidence areas, totaling about 1 acre, resulting from the collapse of stopes within the underground mine workings. The total volume of the Richmond workings has been estimated at approximately 20 million cubic feet (460 acre-feet). The Hornet and Richmond mineralized zones are separated by the Scott Fault which caused the Hornet zone to drop approximately 200 feet relative to the Richmond zone. The bottom of the Richmond mineralized zone is about 100 feet above and 170 feet offset from the top of the Hornet mineralized zone. Iron Mountain Mine was first secured for mining purposes in 1865 and various individuals held the property and conducted limited mining for the recovery of silver from the gossan cap in the late 1800s. The waste-generating activities that created the surface sources of AMD likely began in the 1880s when the gossan was first mined on a large scale and waste rock that was removed to reach the ore was probably dumped into ravines and eventually washed into the creeks. Beginning in late 1894, Mountain Mining Co., Ltd., began operation of the mine. In approximately 1896, Mountain Copper Co., Ltd. assumed ownership of the mine. Under Mountain Copper, Ltd.'s operation of the mines, Iron Mountain became the largest producer of copper in California and the sixth largest producer in the country during the first quarter of the 20th century. The high-grade copper ore in Old Mine was mined until 1907, No. 8 mine from 1907 until as late as 1923, Hornet Mine from 1907 to 1926, the Richmond Mine from 1926 through 1956, Brick Flat Pit from 1929 and 1942, and 1955 to 1962. In 1968, Stauffer Chemical Co. acquired Mountain Copper Co., Ltd., and thereby acquired beneficial ownership of Iron Mountain Mine. Stauffer transferred record ownership of most of the parcels comprising Iron Mountain Mine from its wholly owned subsidiary to itself in 1969. Stauffer operated the copper cementation plant during its ownership of the site and continued to investigate the commercial mining potential of the property. In November 1976, the California Regional Water Quality Control Board issued Stauffer an order requiring the abatement of the continuing pollution from the

IRON MOUNTAIN MINE (Continued)

1000305640

mountain. In December 1976, Stauffer transferred ownership of 31 parcels on Iron Mountain to Iron Mountain Mines, Inc. (IMMI); and in December 1980, five additional parcels were transferred to IMMI. IMMI, a California corporation, is the current owner of Iron Mountain. IMMI constructed a copper cementation plant on Slickrock Creek in 1977. IMMI has intermittently operated this plant and the copper cementation plant on Boulder Creek to recover copper from the AMD. Mountain Copper employed stoping, block caving, and room and pillar techniques in the underground mines; side-hill and open-pit techniques were used at the ground surface. These mining activities and subsequent collapse of underground mine workings have fractured the bedrock overlying the sulfide mineralization, rubblelizing significant quantities of in-place sulfides, and increasing the ability of groundwater to flow through the previously low permeability sulfide zones. The engineered mine openings and the partially collapsed mineralized zones resulting from the mining activity now function as effective groundwater drains, drawing groundwater to and through the sulfide mineralization. The sulfides that were once largely below the water table are now largely within the unsaturated zone, and oxygen is available for reaction. The exothermic oxidation of the sulfide elevates the overall temperature in the sulfide mineralized zone, induces convective air flow, and likely induces evaporation of some subsurface mine waters. These processes contribute to the intensity and pattern of acidic discharges. These mining-related characteristics, in combination with the natural occurrence at Iron Mountain of nearly pure massive sulfide deposits surrounded by bedrock with very little neutralizing capacity, result in a unique hydrogeochemical reactor that is nearly optimal for maximum production of acid mine waters (Nordstrom and Alpers, 1990). Iron Mountain produces mine waters that are among the most acidic in the world, containing extremely elevated concentrations of copper, cadmium, zinc, and other metals known to be toxic to aquatic life. Mining activities at Iron Mountain have also resulted in deposition of large quantities of waste rock and lesser quantities of pyrite tailings on the exposed ground surface at Iron Mountain. Rain and surface flows contact the waste rock and pyrite, which forms AMD and transports contaminants to surface water and sediments. These sources, though secondary in relationship to the quantity and quality of contaminant discharges from the mine workings, are significant, particularly in storm events. The waste rock dumps, mine tailings, unstable excavated areas, and denuded slopes of the watershed contribute to sedimentation in the various drainages. In addition, oxidation of waste materials and portal discharges contribute AMD into Spring Creek, which collects drainage from both Boulder Creek and Slickrock Creek. The increasing use of Sacramento River water to serve a growing California has also increased the significance of Iron Mountain AMD impacts in the Sacramento River. The U.S. Bureau of Reclamation (USBR) constructed Shasta Dam in 1943 to control Sacramento River flows; Keswick Dam, located downstream of Shasta Dam, was completed in 1950. Spring Creek and Sacramento River flows mix in the lower third of Keswick Reservoir. Prior to the USBR's construction of these dams on the Sacramento River, the AMD was often diluted by large flows of water from farther upstream on the Sacramento River. Although fish kills and toxicity problems were documented prior to the completion of Shasta Dam in 1943, the dam compounded the toxicity problems by reducing the availability of dilution flows (CVRWQCB, 1976; Wilson, 1977; Finlayson and Wilson, 1989). Keswick Dam and Reservoir were completed in 1950. This dam restricted the salmon and steelhead to spawning grounds in downstream areas. This restricted the naturally spawning salmon and their early life stages to that area of the Sacramento River with the greatest exposure to AMD discharges from Iron Mountain. After construction of Keswick Dam in 1950, the sediment load from Spring Creek, which previously had been flushed downstream, caused a delta to form in the Spring Creek arm of Keswick

IRON MOUNTAIN MINE (Continued)

1000305640

Reservoir. In response to the problems at Spring Creek, the USER constructed the SCDD in 1963 to control the toxic releases from Spring Creek and to prevent sediment from forming a delta in the vicinity of the Spring Creek Powerplant tailrace. The SCDD allows for the storage and controlled release of water from the Spring Creek basin. Optimally, releases from Spring Creek Reservoir are timed to coincide with releases from Shasta Reservoir to meet interim water quality criteria in the Sacramento River. However, because of the relatively limited capacity of Spring Creek Reservoir with respect to peak discharges from the Spring Creek watershed, there have been uncontrolled spills from the reservoir. Although the debris dam has helped to reduce the incidence and severity of major fish kills, it has not eliminated them. In addition, the gradual release of Iron Mountain AMD from SCDD increases the duration of exposure of fish in the Sacramento River to chronic toxicity resulting from Iron Mountain AMD (EPA, 1992b). Remedial Investigation activities at Iron Mountain began in September 1983, when Iron Mountain was placed on the National Priorities List of the nation's most contaminated sites. In conjunction with EPA's Record of Decision for the first operable unit at Iron Mountain, EPA issued an RI report in 1985 (EPA, 1985a). That report characterizes the entire Iron Mountain site with respect to the nature and extent of contamination from information available at that time. Site characterization studies have continued within the Boulder Creek watershed, and EPA has prepared a second RI report (EPA, 1992a) to present information developed in these additional studies. An Endangerment Assessment (EA) has been prepared to characterize and evaluate the current and potential threats to the environment that may be posed by Iron Mountain contaminants migrating to the groundwater, surface water, and air (EPA, 1992b), and EPA's public health risk assessment (EPA, 1991) has been updated. The Boulder Creek Operable Unit Feasibility Study (OUFS) began as an investigation of the feasibility of the use of lowdensity cellular concrete (LDCC) to stop the AMD formation, a study required by the 1986 ROD. Concurrent with implementing selected remedial actions from the 1986 Record of Decision (ROD), EPA continued its RI/FS activities, including efforts to enter the Richmond Mine workings to investigate groundwater and potential source control alternatives as called for in the 1986 ROD. Based on this further study, the potential use of LDCC has been rejected. Subsequent to these initial investigations, on June 20, 1990, EPA conferred with California support agencies for the Iron Mountain site to determine the sequence of actions necessary to address outstanding site problems. This conference with the State support agencies led to the Boulder Creek OU approach as the next major step towards site cleanup. EPA's Superfund program became involved with the Iron Mountain pollution problem shortly after the enactment of the Superfund law in December 1980. On April 5, 1982, EPA issued general notices of liability to Stauffer Chemical Co. and IMMI for the past and continuing releases of hazardous substances from Iron Mountain and the resulting damage to and destruction of natural resources. The Iron Mountain Mine site was listed on the National Priorities List in 1983. From 1983 through 1985, EPA conducted a remedial investigation/feasibility study of the site and published its report in 1985. After public comment and publication of a Feasibility Study Addendum, EPA signed the first Iron Mountain Mine Record of Decision in October, 1986. That ROD selected a partial remedy at the site, identifying a number of specific projects. These projects included the construction of a partial cap over the Richmond mineralized zone, including a cap of Brick Flat Pit; construction of a diversion in Slickrock Creek to avoid an AMD generating slide; construction of a diversion of the Upper Spring Creek to avoid polluting its cleaner water and filling Spring Creek Reservoir; construction of a diversion of the South Fork of Spring Creek for a similar purpose; a study of the feasibility of filling mine passages with Low Density Cellular Concrete; and an enlargement of Spring

Creek Debris Dam, the exact size of which would be determined after implementation of other remedies. During 1987 and 1988, EPA sued the property owner to gain access to the site for the purpose of constructing the first of these actions. The court granted EPA access and ordered the property owner not to interfere with the remedial actions. On July 19, 1988, EPA initiated construction of the partial cap over the Richmond mineralized zone. As part of that construction, EPA utilized tailings materials from the Minnesota Flat area, as well as selected other tailings piles that contained relatively high concentrations of copper, cadmium, and zinc. EPA completed construction of the partial cap in July 1989. EPA, through the USER, began construction of the Slickrock Creek diversion in July 1989 and completed construction in January 1990. Under an EPA Order, ICIA, on behalf of Stauffer Chemical Company/ Rhone-Poulenc Basic Chemicals Co., began construction of the upper Spring Creek diversion in July 1990. Construction was substantially completed in December 1990. In addition to the activities implemented pursuant to the ROD, EPA recognized the need for additional actions in light of the drought conditions prevailing in California during the late 1980's. In the winter of 1988-1989, EPA operated an emergency treatment plant at the site to reduce the toxicity of the acid mine drainage releases. The following fall, in part due to continuing drought conditions, the winter-run chinook Chinook were listed as a threatened species under the Endangered Species Act. In August 1989, EPA issued an order requiring that potentially responsible parties operate an emergency treatment plant at the site to reduce the toxicity of the AMD discharges for the upcoming 1989-1990 winter wet season and to provide for metals removal for future years until such time as remedial actions could be selected and implemented. This plant was to be comparable in scope and operation to the plant operated by EPA the previous winter. Pursuant to that order, ICI Americas, Inc., on behalf of Rhone-Poulenc Basic Chemicals constructed the treatment plant and has operated this treatment plant during the 1989 -1990, 1990-1991, and 1991-1992 wet seasons. Because of the continuing drought in California and the critical fishery conditions, EPA issued an order on September 2, 1992, for the 1992-1993 wet season requiring that additional emergency measures be implemented, including increasing capacity of the treatment plant. EPA has also issued an order requiring the PRPs to operate and maintain all EPA constructed remedial actions as well as the actions taken by the PRPs under other orders. EPA has identified the following persons as potentially responsible parties (PRPs), parties who may be liable pursuant to CERCLA, for the clean up of the site: the former owner and operator, Rhone-Poulenc Basic Chemicals (successor to Mountain Copper, Ltd., and Stauffer Chemical Company), and the current owner and operator, Iron Mountain Mines, Inc., and its President and primary owner, T. W. Arman. EPA has filed a civil action for recovery of costs and a judgment of liability for future costs against these PRPs. The defendants have denied liability. The defendants have filed cross-claims and have filed counterclaims against the United States (based on alleged U.S. Bureau of Reclamation involvement at the site) and the State of California. A Record of Decision addressing OU02 of the Iron Mountain Site was completed in September 1992. Iron Mountain contains copper, zinc, silver, gold, and pyrite deposits that have been commercially mined since 1879. In the early twentieth century, the Site was one of the largest copper mines in the United States. Mineral extraction methods varied widely. Underground mining ceased in 1956, and surface mining ceased in 1963. Several, and possibly all, of the mines and the waste rock piles are discharging acidic waters, typically with a high content of heavy metals. These discharges are herein referred to collectively as acid mine drainage, or AMD. Within the IMM property, the two largest sources of AMD are the Richmond Mine and the Hornet Mine. Both of these sources drain into Boulder Creek. The third largest source, the Old/No. 8 Mine

IRON MOUNTAIN MINE (Continued)

1000305640

Seep, drains into Slickrock Creek. Boulder and Slickrock Creeks are major tributaries to Spring Creek, and Spring Creek is a tributary to the Sacramento River. Spring Creek flows into Spring Creek Reservoir (the impoundment created by Spring Creek Debris Dam [SCDD]), and enters the Sacramento River at Keswick Reservoir (created by Keswick Dam). Keswick Dam is located approximately 8 miles below Shasta Dam. The Spring Creek Arm is the portion of Keswick Reservoir directly below SCDD and is located 1.4 miles upstream of Keswick Dam. The Arm is oriented due east of SCDD and is approximately two-thirds of a mile long. AMD discharged from IMM is transported via Spring Creek through the Spring Creek Reservoir into the Spring Creek Arm. The Spring Creek Arm serves as a mixing basin for metal-rich acidic waters and sediments released from behind Spring Creek Debris Dam (SCDD) and freshwater from Shasta Dam, Whiskeytown Reservoir, and Keswick Reservoir. Mixing metal-rich, low-pH water from SCDD with higher-pH water results in precipitation of hydrous metal oxides, which can be colloidal in nature. This phenomenon has resulted in deposition, accumulation, and mixing of metal-enriched sediment and precipitates in the Spring Creek Arm and lower Keswick Reservoir. Completed and ongoing remedial actions to control the sources of AMD at IMM have significantly reduced the acidity and metals content in surface water from IMM. Starting in 1994, virtually all of the AMD discharged from the Richmond Mine, Hornet Mine, and Old/No. 8 Mine Seep has been treated at the IMM treatment plant constructed onsite at Minnesota Flats. From 1994 to 1996 the AMD was treated using the simple mix treatment method. Since January 1997, a high density sludge (HDS) treatment system has provided an improved means of treating these discharges. Further cleanup efforts under ROD 4 have recently been completed in the Slickrock Creek watershed at IMM. Among other items, Record of Decision 4 (ROD 4) provides for construction of a retention reservoir to collect AMD area source discharges in the Slickrock Creek Basin for treatment. Treatment of these IMM AMD flows by the completed remedial actions pursuant to ROD 1 through ROD 4 will result in a total reduction of copper, cadmium, and zinc discharged from IMM sources of approximately 95 percent of the pre-1994 discharge. The fishery resources and other sensitive aquatic species in the Sacramento River below Keswick Dam are the primary natural resources at risk from the continuing uncontrolled IMM heavy metal discharges or mobilization of contaminated sediments from the Spring Creek Arm. As a result of past mining activities and current IMM AMD releases, the affected water bodies upstream of the SCDD are essentially devoid of aquatic life and amphibians that are dependent upon that aquatic life. Iron Mountain was first secured for mining purposes in 1865 because of the presence of a large gossan cap, a surface mineral deposit that is the result of the oxidation of pyrite (iron sulfide) that weathered over geologic time to form a surface mineral deposit that is largely iron oxide containing small amounts of gold and silver. Various individuals held the property and conducted limited mining for the recovery of silver from the gossan areas in the late 1800s. The waste-generating activities that created the surface sources of AMD likely began in the 1880s when the gossan was first mined on a large scale, and waste rock, that was removed to reach the ore, was apparently dumped into ravines and eventually washed into the creeks. Beginning in late 1894, Mountain Mines, Limited (Ltd.), began operation of the mine. In approximately 1896, Mountain Copper Company, Ltd. (Mountain Copper) acquired ownership of the mine. Under Mountain Copper, IMM became the largest producer of copper in California and the sixth largest producer in the country during the first quarter of the twentieth century. High-grade copper ore and other minerals in the deposits were mined in Old Mine until 1907, No. 8 Mine from 1907 until as late as 1923, Hornet Mine from 1907 to 1926, the Richmond Mine from 1926 through 1956, and Brick Flat Pit from 1929 to 1942 and 1955 to 1962. In 1967, Stauffer Chemical Co. (SCC) acquired Mountain Copper. In 1968, SCC obtained legal title

to the properties comprising IMM from its wholly owned subsidiary, Mountain Copper Company, Ltd. SCC originally took steps to reopen the mine, but the price of sulfur dropped to a point that caused the option to be uneconomical. SCC operated the copper cementation plant on Boulder Creek during its ownership of the Site and continued to investigate the commercial mining potential of the property. In November 1976, the Central Valley Regional Water Quality Control Board (RWQCB) issued an order to SCC requiring the abatement of the continuing water pollution from the mountain. In December 1976, SCC transferred ownership of 31 parcels on Iron Mountain to Iron Mountain Mines, Inc. (IMMI), and in December 1980, SCC transferred five additional parcels to IMMI. IMMI, a California corporation, is the current owner of the mining properties at Iron Mountain. But, certain property interests retained by SCC's successor at the Site are in the process of being transferred to BLM pursuant to a Consent Decree between SCC, the State of California, and the federal government. IMMI constructed a copper cementation plant on Slickrock Creek in 1977. IMMI has intermittently operated this plant and the copper cementation plant on Boulder Creek to recover copper from the AMD. Remedial investigation (RI) activities at Iron Mountain began in September 1983, when Iron Mountain was placed on the CERCLA National Priorities List (NPL) of the nation's most contaminated sites. The U.S. Environmental Protection Agency (EPA) issued a remedial investigation/feasibility study (RI/FS) report in 1985 and an FS Addendum in 1986. The 1985 RI report characterized the entire IMM Site with respect to the nature and extent of contamination. EPA signed the first ROD (ROD 1) for the IMM Site in October 1986. ROD 1 selected an interim remedy for the Sitewide operable unit (OU), identifying a number of specific projects. EPA's Public Health Risk Assessment was updated in 1991. Site characterization studies continued for the Boulder Creek watershed, and EPA prepared a second RI/FS report for that area in 1992. An Endangerment Assessment (EA) was prepared in 1992 to characterize and evaluate the current and potential threats to the environment that may be posed by IMM contaminants migrating to the groundwater, surface water, and air. The Boulder Creek OU ROD (ROD 2), signed in September 1992, addressed remedial actions for (1) AMD from the Richmond portal (Richmond Mine) and Lawson portal (Hornet Mine), the two largest sources of acidity and metals contamination at Iron Mountain; and (2) the numerous waste rock piles, tailing piles, seeps, and contaminated sediments that also affect contaminant levels in Boulder Creek. Site characterization studies continued for the Slickrock Creek watershed, and EPA prepared an RI/FS report for that area in 1993. The Old/No. 8 Mine Seep OU ROD (ROD 3), signed in September 1993, addressed the third largest source of contaminant discharges at IMM. On the basis of the results of its ongoing monitoring program, EPA concluded that the area source discharges of heavy metals, especially copper, zinc, and cadmium, were closely associated with the intense storm-related high runoff events that characterize the hydrology of the Spring Creek watershed at IMM. Through a formal action in 1991 known as an Explanation of Significant Differences (ESD), EPA revoked the fund-balancing waiver upon which EPA relied for ROD 1. This formal action removed the legal basis for EPA's tentative selection of a 9,000-acre-foot reservoir in ROD 1 in lieu of a larger, more protective dam. Consistent with the SCDD enlargement component of ROD 1 and the ESD, EPA conducted engineering and other studies regarding enlarging the SCDD. These studies indicated that a reservoir of at least 15,000 acre-feet would be required. Because of the projected increased costs of the SCDD enlargement and the availability of other new information, EPA decided to expand its studies, re-evaluate other remedial technologies, and publish for public review and comment a new feasibility study and proposed plan. In June 1994, EPA published a Water Management Feasibility Study (FS), which examined potential remedial alternatives that could control, treat, or manage the safe release of continued uncontrolled contaminant discharges from the numerous and widely

MAP FINDINGS

IRON MOUNTAIN MINE (Continued)

1000305640

dispersed area sources in the Boulder Creek and Slickrock Creek watersheds at IMM. During the public comment period for the 1994 Proposed Plan, a potentially responsible party (PRP), Rhone-Poulenc, Inc. (Rhone-Poulenc, a successor to SCC) (through its representative, Stauffer Management Company [SMC]), submitted a Focused Feasibility Study (FFS). The FFS identified a range of general collect and treat alternatives for the area source releases from the Slickrock Creek watershed. Rhone-Poulenc urged EPA to delay selecting a remedy so that an additional season of data could be collected. EPA determined that delay in remedy selection was justified because the information submitted by Rhone-Poulenc suggested that it was technically feasible (and also more cost effective) to control the IMM pollution on the mountain rather than simply diluting the pollution by enlarging the SCDD and controlling the discharge rate into Keswick Reservoir. EPA signed the fourth Record of Decision (ROD 4) for the Slickrock Creek OU at the IMM Site in September 1997. The selected remedy includes the construction of the Slickrock Creek Retention Reservoir to assure the collection and treatment of the contaminated storm water flows to address the principal threat posed by contaminant releases from area sources within the Slickrock Creek watershed at the IMM Site. EPA conducted site characterization activities in 1997 and 1998 to support the Remedial Investigation (RI) of contaminated sediment. These activities were a collaborative effort among EPA, the U.S. Geological Survey (USGS), and the U.S. Bureau of Reclamation. The City of Redding has a population of approximately 87,000 people and is located approximately 9 miles from the Site. The closest community is Keswick, located just east of the Site, and less than one mile south of the Spring Creek Arm. The land surrounding the Spring Creek Arm is owned by the federal government (i.e., public lands) or Southern Pacific Railroad. The Shasta County General Plan Map for the South Central Region designates the following land uses within one mile of the Spring Creek Arm: Natural Resource Protection-Open Space (N-O), Rural Residential (RA or RB), and Suburban Residential (SR). However, no private residential land directly adjoins the Spring Creek Arm or the Spring Creek Reservoir. Keswick Reservoir is used for recreational activities (e.g., fishing and boating). Land access to the Spring Creek Arm is limited because of steep shores and limited locations where roads or trails extend down to the Arm. Primary access to the Spring Creek Arm is by water from the boat ramp located on the main body of Keswick Reservoir, just to the north of the Spring Creek Arm. Additional access is provided to limited sections of the Arm by the extension of the Sacramento River Trail, constructed by the Bureau of Land Management (BLM) on the old Southern Pacific railroad bed. The section of the Sacramento River downstream from Keswick Reservoir (i.e., below Keswick Dam) currently serves as the water source for the City of Redding, and is used for recreational activities, including fishing and boating. There is no expectation for the future use of the land adjacent to the Spring Creek Arm to change. The Shasta County General Plan Map indicates the majority of the land surrounding the Arm is public lands and will not be developed for residential, commercial, or industrial use. The General Plan is the official land use policy document for Shasta County. Zoning classifications as well as other development policies must be consistent with the General Plan. A proposed change to the County's adopted land use policies or maps contained in the General Plan would require advertised public hearings because of potential environmental and/or land use impacts. Keswick Reservoir and the Sacramento River downstream of Keswick Reservoir are major components of Reclamation's water distribution system in California. In addition to providing valuable water resources, these surface waters provide recreational opportunities and high-quality habitat for spawning and rearing fish, including anadromous fish populations. The Central Valley Project (CVP) is one of the nation's major water conservation developments and is a central component of the California water distribution system. Specifically, Keswick

Dam and Reservoir are used to equalize flow discharged from Shasta Dam and SCPP to enable a relatively constant flow in the Sacramento River downstream of Keswick Dam. Shasta Power Plant, Keswick Power Plant, and SCPP provide power first to meet the project facilities requirements, and then remaining energy is marketed to various customers in northern California. Shasta Power Plant and SCPP are classified as peaking plants, while Keswick Power Plant is a run-of-the-river plant. The past and current IMM AMD discharges continue to impact the beneficial uses of the CVP water resources. Although the current IMM metal discharges have been reduced by 95 percent from the uncontrolled levels, it remains necessary to make low-flow releases from SCPP during releases from SCDD to flush the contaminated water through the Spring Creek Arm to prevent the buildup of metal concentrations in the Arm. The sediment deposits in the Spring Creek Arm that have resulted from past IMM metal releases restrict the range of operating levels of Keswick Reservoir because of concerns that sediment with high metals concentrations in the Spring Creek Arm would become mobilized. The portion of Keswick Reservoir affected by IMM AMD has reduced recreational value. The resident trout fishery in Keswick Reservoir and the main body of the Sacramento River is impacted by both the heavy metal contaminants in the water column of the mixing zones and the heavy sediment loading caused by the precipitation of iron and other heavy metals discharged from the IMM Site over the past century. The Sacramento River salmon fishery (downstream of Keswick Dam) is the most important fishery in the State of California. The salmon fishery has experienced large population declines because of a number of factors, including the IMM AMD impacts. The Sacramento River Winter-run Chinook salmon is listed as endangered by the United States and the State of California, and the Sacramento River Spring-run Chinook salmon is listed as threatened. The Sacramento River also supports a major steelhead trout and resident rainbow trout fishery. Spring Creek Reservoir was constructed in part as a mitigation measure for the AMD discharges and does not support aquatic life, nor is it currently used for any recreational purpose. The Spring Creek Reservoir meters the Spring Creek watershed surface waters, contaminated by the continuing uncontrolled IMM AMD area source discharges, into the Sacramento River at Keswick Reservoir. The portions of Spring Creek impacted by IMM AMD are essentially lifeless. Contaminated sediments in the Spring Creek Arm of Keswick Reservoir are considered to be the fifth operable unit (OU-5) for the IMM Site. The fifth ROD for the IMM Site, addressing OU5, was completed in September 2004.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to

IRON MOUNTAIN MINE (Continued)

1000305640

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Case Type: LUST Cleanup Site
 Status: Open - Site Assessment
 Status Date: 01/22/2015
 Lead Agency: CENTRAL VALLEY RWQCB (REGION 5R)
 Case Worker: BB
 Local Agency: SHASTA COUNTY
 RB Case Number: 450324
 LOC Case Number: Not reported
 File Location: Regional Board
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Other Solvent or Non-Petroleum Hydrocarbon
 Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Secondary Waste: rubble and concrete are examples of this category.
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: Not reported
 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: The case was reopened following a review of case files associated with this site and the adjacent 76 Service Stations UST Case No. 450324. Based upon preliminary review, data indicates that an unauthorized release or undocumented contaminant mass from an underground storage tank system may exist beneath the subject site. Corrective action activities are currently underway as directed by the Central Valley Regional Water Quality Control Board. Work to date has included a preliminary site investigation. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities", or the "Site Maps/Documents" tab. For a complete site history the case file at the Central Valley Regional Water Quality Control Board should be consulted.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/07/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/06/2016	Telephone: 703-603-8704
Date Made Active in Reports: 05/20/2016	Last EDR Contact: 07/06/2016
Number of Days to Update: 135	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895

Number of Days to Update: 64	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895

Number of Days to Update: 93	Next Scheduled EDR Contact: 12/12/2016
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 05/09/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/01/2016	Telephone: 703-603-0695

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Northwest Map: 5605416 REDDING, CA
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

06089C1564G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ENTERPRISE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Riverwash

Soil Surface Texture: very gravelly sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Excessively drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	very gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean Gravels, Well-graded gravel.	Max: 141 Min: 42	Max: Min:
2	5 inches	59 inches	stratified very gravelly coarse sand to gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean Gravels, Well-graded gravel.	Max: 141 Min: 42	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Reiff

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	18 inches	42 inches	stratified sandy loam to loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1
3	42 inches	59 inches	stratified loamy sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Cobbly alluvial land

Soil Surface Texture: very cobbly loamy sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	very cobbly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: Min:
2	11 inches	59 inches	very cobbly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: Min:

Soil Map ID: 4

Soil Component Name: Tujunga

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	14 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 5.6
2	14 inches	27 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 5.6
3	27 inches	59 inches	stratified very gravelly sand to very cobbly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean Gravels, Well-graded gravel.	Max: 141 Min: 42	Max: 7.3 Min: 5.6

Soil Map ID: 5

Soil Component Name: Water

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 6

Soil Component Name: Churn

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	12 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean Gravels, Well-graded gravel.	Max: 14 Min: 4	Max: 6 Min: 5.1
2	12 inches	59 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 4 Min: 1.4	Max: 6 Min: 5.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX G

QUESTIONNAIRES

Analytical Environmental Services
CLIENT QUESTIONNAIRE

Strawberry Fields Site Phase I Environmental Site Assessment

Per ASTM Standard Practice E 1527-13, Section 6, User Responsibilities, the User of an ESA has specific obligations for performing tasks during the ESA that will help identify the possibility of *recognized environmental conditions* in connection with the Site. Failure by the User to fully comply with the requirements may result in a *data gap* being identified in the report and may impact the ability to use the report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). If this questionnaire is not returned to Analytical Environmental Services (AES) prior to issuance of the draft Phase I report, then AES assumes that the User does not have any information or actual knowledge pursuant to ASTM Standard Practice E 1527-13, Section 6, User Responsibilities. AES makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

Please complete the following and return immediately via email or fax to the attention of:

Analise Rivero

E-mail: arivero@analyticalcorp.com

Fax: (916) 447-1665

If other parties are intending to be the Users of the ESA report, then please forward a copy of this questionnaire for them to complete and return to AES.

Please provide the following information (if available) per the requirements of ASTM E 1527-13.

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25)

Are you aware of any environmental cleanup liens against the site that are filed or recorded under federal, tribal, state or local law? Yes or No

If yes, please provide a description of the lien(s).

2. Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? Yes or No If yes, please provide.

3. Specialized knowledge or experience of the person seeking to qualify for the Landowner Liability Protections (40 CFR 312.28)

As the user of this ESA do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes or No If yes, please explain.

4. Relationship of the purchase price to the fair market value of the site if it were not contaminated (40 CFR 312.29)

a. Does the purchase price being paid for this site reasonably reflect the fair market value of the site? Yes or No

b. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site?

Yes or No If yes, please explain.

**5. Commonly known or reasonably ascertainable information about the site
(40 CFR 312.30)**

Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- a. Do you know the past uses of the site? Yes or No If yes, please state.

- b. Do you know of specific chemicals that are present or once were present at the site? Yes or No If yes, please state.

- c. Do you know of spills or other chemical releases that have taken place at the site? Yes or No If yes, please state.

6. Do you know of any environmental cleanups that have taken place at the site?
Yes or No If yes, please state.

7. The degree of obviousness of the presence or likely presence of contamination at the site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of this ESA, based on your knowledge and experience related to the site are there any obvious indicators that point to the presence or likely presence of contamination at the site?

Yes or No If yes, please explain.

RE: Strawberry Fields Site Phase I Environmental Site Assessment

Please complete the questionnaire below with regard to the indicated property. You are being asked to provide this information and insight to assist in the preparation of an environmental site assessment for this property. Please provide as much information as you can to assist in this effort and feel free to attach extra sheets/reports if the space provided is insufficient.

Please fax/send the completed form to:

Analytical Environmental Services
Attn: Analise Rivero
1801 7th Street, Suite 100
Sacramento, CA 95814

Telephone (916) 447-3479
Fax (916) 447-1665
Email arivero@analyticalcorp.com

Thank you for your help and cooperation.

ENVIRONMENTAL QUESTIONNAIRE

Strawberry Fields Site Phase I Environmental Site Assessment

Question	Answer	Responses to “Yes” Questions
1. Is the property or any adjoining property currently used for industrial purposes?	Property: NO UNK YES Adjoining: NO UNK YES	
2. To the best of your knowledge, has the property or any adjoining property been used for industrial purposes in the past?	Property: NO UNK YES Adjoining: NO UNK YES	
3. Is the property or any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Property: NO UNK YES Adjoining: NO UNK YES	
4. To the best of your knowledge, has the property or any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	Property: NO UNK YES Adjoining: NO UNK YES	
5. Has fill dirt been brought onto the property that originated from a contaminated site or that is of an unknown origin?	NO UNK YES	

ENVIRONMENTAL QUESTIONNAIRE

<p>6. Are there currently, or to the best of your knowledge have there been previously, any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than five gallons (19 liters) in the aggregate, stored on or used at the property or at the facility?</p>	<p>New?: NO UNK YES Past?: NO UNK YES</p>	
<p>7. Are there currently, or to the best of your knowledge have there been previously, any industrial drums (typically 55 gallon [208 liters]) or sacks of chemicals located on the property or at the facility?</p>	<p>New?: NO UNK YES Past?: NO UNK YES</p>	
<p>8. Are there currently, or to the best of your knowledge have there been previously, any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal?</p>	<p>New?: NO UNK YES Past?: NO UNK YES</p>	
<p>9. Is there currently, or to the best of your knowledge has there been previously, any areas of stained soil on the property?</p>	<p>New?: NO UNK YES Past?: NO UNK YES</p>	
<p>10. Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered storage tanks (above or underground) located on the property?</p>	<p>New?: NO UNK YES Past?: NO UNK YES</p>	

ENVIRONMENTAL QUESTIONNAIRE

<p>11. Are there currently, or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?</p>	<p>New?: NO UNK YES Past?: NO UNK YES</p>	
<p>12. Are there currently, or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?</p>	<p>New?: NO UNK YES Past?: NO UNK YES</p>	
<p>13. If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government environment/health agency?</p>	<p style="text-align: center;">NO UNK YES</p>	
<p>14. Does the owner or occupant of the property have any knowledge of environmental liens or governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?</p>	<p style="text-align: center;">NO UNK YES</p>	

ENVIRONMENTAL QUESTIONNAIRE

<p>15. Has the owner or occupant of the property been informed of the past or current existence of hazardous substances or petroleum products or environmental violations with respect to the property or any facility located on the property?</p>	<p style="text-align: center;">NO UNK YES</p>	
<p>16. Does the owner or occupant of the property have any knowledge of any environmental site assessment of the property or facility that indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?</p>	<p style="text-align: center;">NO UNK YES</p>	
<p>17. Does the owner or occupant of the property know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the property by any owner or occupant of the property?</p>	<p style="text-align: center;">NO UNK YES</p>	
<p>18. Does the property discharge waste water on or adjacent to the property other than storm water into a sanitary sewer system?</p>	<p style="text-align: center;">NO UNK YES</p>	

ENVIRONMENTAL QUESTIONNAIRE

19. To the best of your knowledge, have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried, and/or burned on the property?	NO UNK YES	
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?	NO UNK YES	

21. How do you currently use the property and how have you used the property in the past (please be specific).

22. What is your understanding of how the property was used before your ownership/occupancy?

ENVIRONMENTAL QUESTIONNAIRE

APPENDIX H

RESUMES

David Zweig, PE, President

Education: B.S., Civil Engineering, University of California, Berkeley

Registration: California P.E. License #C048031; Washington P.E. License #28181

Mr. Zweig is experienced in preparing both routine and complex Phase I and Phase II Environmental Site Assessments, water rights permitting and regulatory compliance, and conducting water quality monitoring. Mr. Zweig has provided technical oversight and completed numerous Phase I and Phase II hazardous materials investigations for public agencies and private parties throughout California and the U.S. Mr. Zweig is very familiar with the regulatory issues faced by private industry and public agencies, and is adept at facilitating compliance with local, state and federal environmental laws. A partial listing of recent Phase I and Phase II reports completed by AES is provided below.

Analise Rivero, Analyst I (Environmental Specialist)

Education: B.A., Environmental Studies, The George Washington University, Washington D.C.;
Minor: Geographic Information Systems

Ms. Rivero is an environmental specialist with expertise in state and federal environmental policy, alternatives analysis, and analyzing potential impacts to geology, air quality, hydrology, and soils. She is experienced in the preparation of CEQA and NEPA compliance documents for government agencies as well as private enterprises. Additionally, she has experience with a range of tribal clients, preparing applications and related technical studies for the Bureau of Indian Affairs. Ms. Rivero currently serves as an environmental analyst on various CEQA/NEPA documents for a variety of local, state, and federal agencies, as well as an array of private clients.

- Davis Friesen Timber to Vineyard Conversion Project **EIR**, Napa County, CA
- Davis Lommel Timber to Vineyard Conversion Project **EIR**, Napa County, CA
- Ewiiapaayp Reservation Walker Property Health Clinic Fee-to-Trust **EA**, San Diego County, CA

- Lytton Rancheria – (Artesa Property) **EO**, Sonoma County, CA
- Walt Ranch Erosion Control Plan **EIR** and **Technical Studies**, Napa County, CA
- Yorkville Vineyards Water Right Project **IS/MND** and **Technical Studies**, Mendocino County, CA
- Stagecoach North Vineyard **EIR**, Napa County CA
- McGehee Water Rights Project **IS/MND** and **Technical Studies**, Mendocino County, CA
- Rogina Water Company - Water Right Project **CEQA Documentation**, Mendocino County, CA
- North Fork Rancheria **EIS**, Madera County, CA
- Ciminelli Vineyard Conversion, **EIR**, Napa County, CA
- Osage Nation Revised **Environmental Assessments**, Osage County, OK
- Le Colline Timber to Vineyard Conversion Project **EIR**, Napa County, CA

Katherine Green, Environmental Specialist

Education: B.S., Environmental Science and Management, University of California, Davis;
B.S., English, University of California, Davis

Ms. Green is an environmental analyst with experience in many diverse areas, including CEQA/NEPA documents, environmental law, urban planning, public lands management, and GIS. She is experienced in preparing Phase I Environmental Site Assessments both in and out of the State of California. She has previously worked in both city government and academic research, and currently serves as an analyst and technical editor on a variety of environmental compliance documents, including environmental assessments, environmental impact statements, constraints reports, and technical memorandums. Specific project experience is listed below.

- 10th and Broadway **Phase I ESA**, Sacramento County, CA
- 1724 10th Street **Phase I ESA**, Sacramento, CA
- 17th and Q **Phase I ESA**, Sacramento CA
- 1811 12th Street **Phase I ESA**, Sacramento County, CA
- 1827 J Street **Phase I ESA**, Sacramento County, CA
- 1930 H Street **Phase I ESA**, Sacramento County, CA
- Buena Vista Rancheria - **Fee-to-Trust Application**, Buena Vista Rancheria, Amador County, CA
- Cahto - Gas Station **EA**, City of Laytonville, CA
- City of Roseville - Placer Ranch Specific Plan **EIR**, City of Roseville, CA
- City of Sacramento - Pacifica Senior Living Facility Project **IS**, City of Sacramento, CA
- Coquille Indian Tribe - Casino Development Project **EIS**, Medford, OR
- Coyote Valley - Pine Crest Parcel **Technical Memorandum**, Mendocino County, CA
- Graton Rancheria - **Mitigation/Monitoring Plan Quarterly Reports**, Sonoma County, CA
- Graton Rancheria - NW Specific Plan Parcels **Constraints Analysis**, Sonoma County, CA
- Ho-Chunk Nation - Beloit Casino **Alternatives Evaluation**, City of Beloit, WI
- Jena - Fee-to-Trust **EO**, Grant and La Salle Parishes, LA
- Barstow Casino and Resort Two-Part Determination Fee-to-Trust **EIS/TEIR**, Los Coyotes, San Bernardino County, CA
- Lytton Rancheria – Multiple – **Phase I ESA**, Sonoma County, CA

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
RITE AID NO 6100	3095 MCMURRAY DR	E 1/8 - 1/4 (0.143 mi.)	F25	52

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, has revealed that there are 21 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 8 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 11 CUPA Listings sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 15 HIST CORTESE sites within approximately 0.5 miles of the target property.

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 09/10/2015 has revealed that there are 3 Notify 65 sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
R.V.'S UNLIMITED	2374 NORTH STREET	E 0 - 1/8 (0.028 mi.)	A2	8

ANDERSON EXXON	2470 BALLS FERRY RD.	E 1/2 - 1 (0.785 mi.)	50	101

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
Not reported	2374 NORTH ST	E 0 - 1/8 (0.028 mi.)	A1	8
Not reported	2417 NORTH ST	E 0 - 1/8 (0.031 mi.)	7	13
Not reported	2350 NORTH ST	ESE 0 - 1/8 (0.069 mi.)	A11	23
Not reported	2298 NORTH ST	SE 0 - 1/8 (0.072 mi.)	C13	24
Not reported	2142 NORTH ST	S 0 - 1/8 (0.099 mi.)	D19	38

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

LUST:

Region: STATE
 Global Id: T0608900077
 Latitude: 40.451174484
 Longitude: -122.300883721
 Case Type: LUST Cleanup Site
 Status: Open - Eligible for Closure
 Status Date: 06/18/2015
 Lead Agency: CENTRAL VALLEY RWQCB (REGION 5R)
 Case Worker: BB
 Local Agency: SHASTA COUNTY
 RB Case Number: 450077
 LOC Case Number: Not reported
 File Location: Regional Board
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
 Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)
provides California with information on hazardous waste shipments for
generators, transporters, and treatment, storage, and disposal
facilities.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Region: STATE
 Global Id: T10000007299
 Latitude: 40.4528
 Longitude: -122.28963
 Case Type: LUST Cleanup Site
 Status: Open - Remediation
 Status Date: 12/08/2015
 Lead Agency: CENTRAL VALLEY RWQCB (REGION 5R)
 Case Worker: MAB
 Local Agency: SHASTA COUNTY
 RB Case Number: 450366
 LOC Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Benzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates
 Site History: The Site is an active commercial petroleum fueling facility. An unauthorized release was discovered at the Site in October 1993 during the removal of three USTs. The tanks were replaced by a double walled system. Subsequently a case was opened with the Central Valley Water Board (Beacon Station No. 572 Case #450150). Approximately 900 cubic yards of impacted soil was removed during UST removal activities. Maximum soil concentrations of toluene, ethylbenzene, total xylenes, and gasoline were detected at 51, 38, 210, and 2,100 mg/kg, respectively. During 1993 and 1994, four shallow monitoring wells and one recovery well were installed and sampled. Low levels of gasoline were detected in the vicinity of the former tank basin. The Beacon Station No. 572 Case #450150 was closed in August 1995. In September 2006, five direct push soil borings were advanced as part of a site assessment for a pending real estate transaction. Groundwater impacts were detected in two borings therefore a second unauthorized release report was submitted to Shasta County. In 2015, a limited subsurface investigation is proposed to determine the full extent of groundwater impacts beneath the Site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/07/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/07/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/06/2016	Telephone: 703-603-8704
Date Made Active in Reports: 05/20/2016	Last EDR Contact: 07/06/2016
Number of Days to Update: 135	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/22/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/31/2016
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/22/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/31/2016

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895
Date Made Active in Reports: 09/02/2016	Last EDR Contact: 06/30/2016
Number of Days to Update: 64	Next Scheduled EDR Contact: 10/17/2016

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895
Date Made Active in Reports: 09/02/2016	Last EDR Contact: 06/30/2016

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/21/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/30/2016	Telephone: (415) 495-8895

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

INDIAN UST R5: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 5 (Michigan, Minnesota and Wisconsin and Tribal Nations).

Date of Government Version: 11/05/2015	Source: EPA Region 5
Date Data Arrived at EDR: 11/13/2015	Telephone: 312-886-6136
Date Made Active in Reports: 01/04/2016	Last EDR Contact: 07/27/2016
Number of Days to Update: 52	Next Scheduled EDR Contact: 11/07/2016
	Data Release Frequency: Varies

INDIAN UST R10: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 10 (Alaska, Idaho, Oregon, Washington, and Tribal Nations).

Date of Government Version: 01/07/2016	Source: EPA Region 10
Date Data Arrived at EDR: 01/08/2016	Telephone: 206-553-2857
Date Made Active in Reports: 02/18/2016	Last EDR Contact: 07/27/2016
Number of Days to Update: 41	Next Scheduled EDR Contact: 11/07/2016
	Data Release Frequency: Quarterly

INDIAN UST R9: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 9 (Arizona, California, Hawaii, Nevada, the Pacific Islands, and Tribal Nations).

Date of Government Version: 02/25/2016	Source: EPA Region 9
Date Data Arrived at EDR: 04/27/2016	Telephone: 415-972-3368
Date Made Active in Reports: 06/03/2016	Last EDR Contact: 07/27/2016
Number of Days to Update: 37	Next Scheduled EDR Contact: 11/07/2016
	Data Release Frequency: Quarterly

INDIAN UST R8: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 8 (Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming and 27 Tribal Nations).

Date of Government Version: 01/26/2016	Source: EPA Region 8
Date Data Arrived at EDR: 02/05/2016	Telephone: 303-312-6137
Date Made Active in Reports: 06/03/2016	Last EDR Contact: 07/27/2016
Number of Days to Update: 119	Next Scheduled EDR Contact: 11/07/2016
	Data Release Frequency: Quarterly

INDIAN UST R1: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 1 (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont and ten Tribal Nations).

Date of Government Version: 10/20/2015	Source: EPA, Region 1
Date Data Arrived at EDR: 10/29/2015	Telephone: 617-918-1313

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.
